# June 5-11 CONTENTS

POPULAR  
**Computing**  
WEEKLY

## News

- 6 News Desk** Who launched what at the showpiece Consumer Electronics Show (CES), held in Chicago earlier this week.
- 40 Communications** Graham Edkins returns with the latest news from CompuNet.
- 42 Soundcheck** Cheetah Marketing has converted its Spectrum Midi interface to the Amstrad CPC machines. Mark Jenkins looks at the new version.

## Features

- 13 Philips TV tuner** Turn your composite video monitor into a TV with this device.
- 14 1st Word Plus** GST's word processing program is now running under Gem on the Amstrad PC. Roger Howarth assesses its chances.
- 28 Readers' Survey** Help us serve your interests better by filling out the questionnaire - you could win a copy of Superior's *Success in Software* booklet.

## Programming

- 17 First Steps in machine code** Kenn Garroch begins a new series on programming, explaining the principles of machine code for beginners.
- 19 Listings** If election-speak is beginning to pall, turn off the TV, switch on the micro and type in the first part of Duncan Evans' Popular Election game for the Spectrum. Non-Spectrum owners can content themselves with the final part of Micromon on the C64. Register Loader on the CPCs and a font designer for the QL. Plus Bytes and Pieces.
- 39 Peek and Poke** Kenn Garroch answers your programming queries.

## Special Supplement - the BBC

- 24 Games reviews** *The Big KO* and *Phantom* from Tynesoft, *Imogen* from Micropower and *Starquake* from Bubble Bus are among the selection of games reviewed.
- 26 Genie** Desktop accessories from PMS.
- 32 Music 5000** Mark Jenkins reports on the updated version.
- 33 Quest Mouse and special offer** Watford Electronics' has produced a mouse and software for the BBCs, and we've got a special £10 off deal for Popular readers.
- 34 Spell checker and graph plotter** Utilities from Computer Concepts.

## Games

- 48 New releases** Your complete guide to all the games released this week, including *Barbarian* from Palace Software, and *Thing Bounces Back* from Gremlin. Plus *Space Max*, a space station 'construction kit' for IBM PCs and compatibles from Final Frontier Software.

## White streaks on the 64

You stated that Load-It for the Commodore C2N tape deck (Next Week, May 8 and Review, May 15) would solve alignment problems once and for all.

However, I own a 1531 tape deck, so could you tell me if Load-It is available for the 1531?

Only about seven of my 20-odd games (which loaded a couple of months ago) load now. I think it is my C64 because some white streaks about one centimetre long flash across the screen every now and again and make a crackling noise.

Although I think it's the power pack, but it could also be poor alignment of the tape heads.

It is still under guarantee, so could you advise me and tell me what's gone wrong?

Also could you tell me if Elite and Ocean are releasing Ikari Warriors and Batman respectively for the C64?

J Murphy  
Tunley, near Bath

We assume that Load-It can be fitted to the 1531; contact the manufacturer on 021-745 4970 to check.

However, it sounds as though your power supply is the real problem, though, and yes, this will mean taking it back to the shop.

We believe that both Ikari Warriors and Batman are scheduled to appear on the C64, but haven't seen them yet.

## Solution service for adventurers

I am trying to start a small business called Game Solutions. It is to help puzzled Spectrum adventure players.

I can help on most recent Spectrum adventure games (except Level 9). The help available comes in three forms:

1) Specific questions - people should write to me at 62 Leighwood Avenue, Leigh on Sea, Essex SS9 4LG, enclosing a 20p coin. I will then answer as many questions on games they are stuck on as they like. But they should make sure the games are fairly recent and reasonably well known.

2) Typed solutions - I have solutions to the following games. Each one costs 20p.

You can order as many as you like in one go.

Games available are *Subsunk*, *Imagination*, *Seabase Delta*, *The Helm*, *Sherlock*, *Gremkins*, *Robin of Sherwood*, *Robin of Sherlock*, *The Hulk*, *Spiderman*, *Terramorphos*, *Hamstead*, *Colour of Magic*, *Bored of the Rings*, *The Boggit* and *Project X - The Microman*.

All of these solutions are available in program form at 20p each. Please include a blank tape for recording.

3) Phone calls (0702 510136) - I will be able to take calls asking for help on Sundays between 5pm and 7pm (only these times, please).

Colin Walsham  
Leigh on Sea

"It's quite a little money-spinner I believe."

## Atari printing without tears

anybody out there owns an Atari ST, a Canon PW-1080A printer and the Signum word processor they may have found that they couldn't get them all to work with each other properly.

They may be interested to know that the problem is easily solved, although it means opening up the printer and soldering in a resistor to the mother board which will probably void any warranty still left on the printer.

The problem seems to lie in the fact that a number of printer manufacturers, whilst adhering to the Centronics standard, have chosen to use resistors of a lower rating than others in their interfaces. With most computers this has proved to be no problem; however, the Atari ST's seem to have an output that sometimes causes synch-

ronisation errors. For some reason, Signum seems to produce this error much more readily than other printing software.

The solution is to solder a 150 ohm resistor across pins 1 and 19 of the input socket of the printer. This unfortunately means that the printer must be pretty well dismantled to get at the underneath of the mother board. Luckily, due to the excellence of construction used by Canon, it's not as difficult as it sounds. The only thing to watch is that the power supply has to be loosened and slid to one side to remove some earth wires before the board can be lifted out.

Once this is done and the printer is reassembled you should find that the ST, the Canon and Signum are now talking to each other properly. This will also work for the Kaga Taxan 810 (which is a Canon under a different name) and may also work on Juki, Mannesman Tally or Triumph Adler if they appear not to like Signum much.

As to whether or not it's worth going to all this bother just for one program I suggest you have a look at the final output to convince yourself it probably is (my thanks to Hugh Gollner for the info).

Mark Annetts  
Richmond, Surrey

## Too much for the C2N

A word of warning to any Commodore 64 cassette user. After twelve months of trouble free loading, saving and verifying, I had come to regard my C2N as a trustworthy hunk of hardware.

The problem started after shelling out 15 green ones on Gunship from Microprose.

After 20 minutes worth of loading I thought to myself, this had better be good, and it was, but that is enough of that. A marathon four hour session ended in frustration, when (after a stunningly successful mission), instead of reviewing my performance the file being searched by the program was never found. The tape ended. The program locked up.

Did I check the tape head? I dutifully cleaned and resigned and all was fine till a day later it happened again, and again, and again. In hope I tried a friend's deck and that worked ... for two days.

As you will know, Gunship was originally meant as a disc program, but after years in development Microprose must have felt the need to tape it. I am sure all that time paying programmers' salaries soon mounts up but all that file accessing is just too much for the poor old C2N. So come on Microprose: if it doesn't fit, don't force it!

T A Kelly  
Middlesbrough

Microprose says that if you fill in the form on your inlay card and send it to the company, you will be able to use its helpline service, which may suggest a solution to your problem.

## Making Neos work with Geos

I read with interest your April 17 issue supplement with the article on Geos, but was very disappointed to see that Geos is not compatible with current mice.

This was very distressing as I had purchased a Neos mouse just the week before, and had got it principally with a view to purchasing Geos for my Commodore 64.

However, I have since discovered that the Neos mouse can work as a joystick if it is plugged in with the left mouse button held down. This also means that it need not be unplugged to allow typing on the keyboard as is required with it in its normal mouse mode. This means that the Neos mouse (which is the one that comes with the Commodore Connoisseur's Compendium, which you mentioned) is therefore compatible not only with Geos, but with all other software which is joystick controlled.

Iain Murray  
Dundee

## Whose copyright on my programs?

I am employed as a software engineer. I design, modify and test industrial software written in a low level type language (Siemens Step 5). This software controls machine tools and runs in an industrial control computer system (CMC machines).

I wish to write games or educational software in machine code and Basic. They would run on a Commodore 64 or BBC computer and I would

like to offer them to commercial software houses.

The computer equipment I wish to use is my property and the development work would be carried out in my own time.

Could my employer claim copyright on such programs?

Marion Tuck  
Hove, East Sussex

**The copyright would be yours unless there is a clause in your contract stating that any programs you develop must be offered to the company first.**

## Rainbird revisited

In *Popular*, 13-19 March, you did a review of Rainbird's *Advanced Art Studio*. To use the sprite files you have created, you needed to use the RS232. Does this mean that you need to use two ST computers?

Secondly, in the same magazine, you made a comment that you may do a comparative review of Eidersoft's *ProSprite Designer* (which they claim to be 'the slickest sprite and animation designer available') and the *Microdoodle* sprite designer. Have I caught you out? If so, will you be doing a review?

K Gordon  
Nottingham

**You only need to use RS232 to transfer files from one micro to another, not to use them simply on your ST.**

The comparative review of the sprite designers appeared in *Popular*, April 3.

## Monitoring the Amiga 500

I have some experience with buying computers, having purchased a BBC B and 580STM in the past.

While it was easy to get the machines, due to friendly and helpful salespeople, getting information on monitor compatibility proved a nightmare.

I currently own a Philips CM8533, but I am not sure whether it will work with the new Amiga 500. Please will you print a list of monitors which will fit on the new Amigas when they come out.

Richard Van Tienen  
Bury St Edmunds

**The A500 has a standard RGB monitor connection, and hi res mono video output, and a RF modulator will be made available at launch. This makes the list of potentially**

**compatible monitors rather longer than we have room for here. Most Amiga dealers will, of course, be stocking suitable hi res colour monitors.**

## In defence of benchmarks

I was surprised that BmA and BmB were perceived as put-downs (Letters, May 22). They merely show the other side of a coin that will always be two-sided.

To recollect, some readers were suggesting that there was a need for more speed-related benchmarks. Official benchmarks have undergone change but are still concerned solely with speed.

It is, incidentally, the speed of the GOSUB, not *Street Basic's* PROCEDURE that is measured. However, I am grateful to Alan Gray and Jonathan Temple for correcting my misrepresentation of the recursion position, and their figures should, of course, be substituted.

John Coll, speaking on BBC TV, said that the original benchmarks were designed to expose a Rom author's inadequacies. I make no such claim for mine and it would have been grossly misleading had I done so.

They do demonstrate that Steven Vickers (for it is he) has forsaken speed in order to place as few restrictions as possible in the path of the 'absolute beginner' (his stated target). Apart from some quite sensible, alphabetic restrictions - you can nest 26 FOR-NEXT loops if you really want to - the only limitation is available memory and imagination.

This applies to the GOSUB stack, string length, complexity of expression, program area, number of array dimensions, UDG area, input buffer and machine stack to list but a few. The suggestion is not that you should use very long lines - but that if you exploit the system's flexibility, you will only ever encounter that single limitation.

The MSX standard is designed "in the American tradition of solving one's problems by means of much equipment rather than by thought". Using extra hardware for sprites and collision detection merely deludes and cocoons the beginner. In contrast, the Spectrum programmer achieves results using pure Basic or pure machine-code and has an im-

mediate, genuine sense of achievement.

As to the computed GOTO - life begins at 40. This was instruction 0 on the world's first computer - built at Manchester in 1948 and subsequently licensed to IBM. Much of the pioneering work was done by a young, Cambridge mathematician who, some years earlier had begun designing instruction sets and writing programs first for a 'Turing Machine' and then for the 'Automatic Computing Engine'.

He found that it was possible to achieve very fast, conditional branching not by testing conditions, but by forming the next instruction from those conditions.

Forming, instead, the next address is just a variation of this theme and the essence of the computed GOTO.

It is present in all instruction sets. Motorola recommends using JMP (An) for speed on the M68000. You can use it on the Spectrum in Basic and machine-code JPHL. If a high-level language doesn't have the computed GOTO, it can't claim to be Symbolic Instruction Code.

Similarly, you won't find the ELSE construct in a Vickers Basic (he wrote ZX 81 Basic as well) since there is no instruction code equivalent.

You will find ELSE in his Forth-based Ace because this structured language makes no claim to be symbolic.

By constructing an ELSE or unbounded loop in Basic, you automatically learn how to do it in machine code.

If benchmarks are to shape the evolution of Basic, then let's ensure we safeguard the interests of the true owners of Basic. Most of these people do not own a computer. Most of them have yet to start buying this magazine. It is solely for their benefit that any 'improvements' should be made.

G Wearmouth  
London N17

## Knight moves

The latest round of readers' votes in Game Two of the Colossus chess tournament did not surprise the computer opponent. As expected, the readers moved their knight back to c3. Colossus continues to build its attack on the queen's side with the bishop. (See diagram for details.)

## The next move

So, how would you contain this attack?

Send your suggested readers' move to either *Inter-Mediate (Popular Chess)*, Freeport, Sawbridgeworth, Herts CM21 9YA (no stamp needed), or *Popular Chess*, Unit 2, The Mailings, Sawbridgeworth, Herts CM21 0PG (with a stamp). Please note that Freeport is slower than the normal service, so if you want to save stamp money, get your entry off promptly.

Only one vote per person please, and all entries must reach either address by Wednesday, June 10.

The move which gets the most votes will be entered into the game. Results and Colossus's response will be published in two weeks' time.

Next week, we return to Game One, where the Readers are playing black.

We're sorry but *Popular Computing Weekly* cannot guarantee to reply to all letters requesting a personal answer. It helps us enormously if readers are prepared to have general queries answered on these pages, so, if possible, please do not send SAEs.

# Amstrad to launch PC1640 in US

AMSTRAD was expected to launch its new PC range at Comdex in Atlanta, US, this week.

The new PCs are enhanced versions of the PC1512 range. They have 640K Ram, and built-in MGA, CGA and EGA adaptors - mono Hercules, colour graphic adaptor and enhanced

graphic adaptors. The new machines are believed to use the Intel 80286 processor.

As with the PC1512s, a choice between mono or colour monitors and floppy or hard drives is being offered by Amstrad.

The new models are to be called the PC1640 series, and

while not replacing the PC1512s, for the time being at least, they will be sold in more specialist outlets, leaving the PC1512s to mass market and consumer electronics outlets.

Amstrad has scheduled the PC1640 for delivery in the US on September 1, although it is not yet clear when they will appear

in the UK. US prices range from \$899 (about £599) to \$1,999 (about £1,335), which means that the PC1640s will sell for \$100 more than their direct PC1512 equivalents. Again, price details for the UK are not yet known.

An announcement from Amstrad is expected shortly.

## BT Bielby deal

FIREBIRD Silver has signed an exclusive deal with budget distributor Richard Bielby.

Bielby previously sold Silver product into the shops in tandem with Codemasters', on a UK basis.

This latest move means that Bielby will no longer be dealing with Codemasters' product.

Codemasters' David Darling explained the implications for the company.

"It won't be making any difference. Codemasters already handles all its European and worldwide distribution itself - in future, we'll handle the UK side as well," he said.

"It should be a smooth changeover."

Darling added that he and his family colleagues at Codemasters, father Jim and brother Richard, are on good terms with Bielby. He is assisting them with their changeover plans.

Bielby made a name for himself in the early days of Mastertronic - now the UK's leading budget software house.

It was Bielby who helped get Mastertronic product sold through CTNs - confectioners, tobacconists and newsagents.

This has been an important factor in the success of Mastertronic and its budget software

generally.

Commenting on the Firebird deal, Bielby described the move last week as inevitable, and said:

"The decision to go with Firebird was based on our experience of working with them over the last twelve months in the independent market: our knowledge of their future products already in the pipeline; and the fact that we have been given the opportunity to expand our area of operation into the multiple market."

Firebird Silver boss Chris Smith commented: "We are over the moon."

## Furry tales in carrot game

CRL is launching a karate game with a difference this month. *Ninja Hamster* features the eponymous hero, who's up against a rat, a lizard, a bee and other creatures.

"But why a hamster? 'We don't really know,'" explained a CRL spokesperson.

"It's a karate fighting game, following on from all these Karate and Ninja things. Someone had the idea to do one with a lot of humour, so it's got all these large cartoon animal characters."

*Ninja Hamster* will be released shortly for the Spectrum, with Commodore and Amstrad versions due in July. It costs £7.95 on cassette and £14.95 on disc.

Further information from CRL, CRL House, 9 Kings Yard, Carpenter's Road, London E15 2HD, telephone 01-533 2918.

## VDU dangers: new book

A NEW book detailing the disturbing side-effects of VDUs has been published by the London Hazards Centre.

The *VDU Hazards Handbook* is based on over 10 years' research, and has come up with some worrying claims.

● VDU operators are twice as likely as other clerical workers to suffer from angina.

● A VDU operator sitting 18 inches from the screen experiences a positive electrical charge of 150 volts per square inch (compared with three volts per square inch under normal conditions).

● Low frequency radiation like that emitted from VDUs has been shown to cause deformities in the foetuses of rabbits, rats and chickens.

The book comes only weeks after a report exposed similar dangers for workers at the London Borough of Newham (see *Popular Computing Weekly*, May 8).

The *VDU Hazards Handbook*, by Ursula Huws, costs £4.95 plus 50p postage and packing from London Hazards Centre, 3rd Floor, Headland House, 308 Gray's Inn Road, London WC1X 8DS, telephone 01-837 5605.

# Page 3 touch works for Barbarian: Amiga version soon

PALACE Software is working on an Amiga version of its new hit game *Barbarian*.

Palace managing director Pete Stone confirmed the move last week, but was unwilling to give a firm commitment on release dates.

"We wouldn't like to predict anything yet. It's a little bit too early to say, because the Amiga is a much bigger and more complex machine," he said.

"It's not just a conversion of the graphics, sound and so on have all yet to be redone."

Meanwhile Palace's use of Page Three model Maria Whittaker in the artwork for its new hit game appears to be getting the publicity the company hoped for.

Boots recently gave Palace an ultimatum - remove the picture of a scantily-clad Ms Whittaker from the packaging, or it wouldn't stock the game.

Palace agreed to the demand, and produced new

artwork especially for Boots, with Whittaker removed from the cover and no poster included.

Stone denied that the move was a climbdown. He claimed that *Barbarian* is currently the UK's fastest selling title.

He added that no other retailers had complained about the pictures - which show Ms Whittaker draped around an equally scantily-clad strong silent type.

So why did Boots? "They felt - for whatever reason - that they didn't want to stock the game with Maria Whittaker on the cover, and on the poster inside."

"It's one of those covers that produces a bit of feeling, for and against."

A Boots spokeswoman confirmed that the company "didn't want that sort of packaging in its stores". But it appears that Boots didn't object to the semi-naked man. He still appears on the cover.

# Questions for Amstrad as Futura appears

TONY Tebby is a man best known for writing the operating system for the QL. At last weekend's ZX Microfair the Futura, purported to be the machine that the QL was supposed to be, was displayed on the Sandy stand.

On paper, the system features a full 68000 processor, a 3½ inch disc drive, 512k memory and a proper keyboard.

When all the bugs have been pulled out the operating system will be, "compatible but not the

same as ODo," said Mr Gardner, one of the directors of Sandy.

However, the basic Futura model has exactly the same screen resolution as the QL and claims to be able to load all QL software. Amstrad, which owns the rights to the QL technology was not available to comment as we went to press.

As yet there is no release date for the Futura, although a price tag of £575 for the basic model has been mooted.

## SOFTWARE HOTLINES

Everybody in the world wants to talk to **Douglas Adams** at the moment. The man is in the middle of meet the press sessions not only in the UK, but also the US, Canada and other places too distant to mention.

Such is the price one must pay for not only having just completed a book - *Dirk Gently's Holistic Detective Agency* - but also an adventure game - *Bureaucracy*, published by Infocom.

However, since *Popular* is the sort of mag that prefers to work on forward rather than reverse thrust, here's what the prolific Adams plans to do next.

Despite feeling that the *Hitchhikers' Guide to the Galaxy* theme is probably played out, Adams hopes to produce a follow-up *Hitchhikers' micro* adventure, although there will probably be less direct Adams involvement in the sequel than than the original.

He also has plans to write an adventure concerning the difficulties of getting one's movie made in Hollywood (a pressing problem for many, I'm sure). Says Adams, "The situations in *Hitchhikers* seem mundane compared to the difficulties I had with the movie when I was out there."

He's also been getting into computer music, having amassed a fair collection of synthesiser and Midi equipment, and would like to release an album. Track details are necessarily sketchy - most of it at the moment is in the form of Macintosh sequence files, but according to the composer, "it'll

be somewhere in the nebulous area between rock and jazz".

On to more immediate matters, and **Ultimate**, having been on a year long sabbatical between the US Gold deal and the release of *Martianoids*, is fairly racing now with the launch of *Bubbler* (pictured below).

The story behind the game involves the ancient city of Irkon, the evil wizard Vadra, your imprisonment by Vadra, and your malicious transformation into an amorphous blob.

Citizens of Irkon are kept as an Irkonid version of the Stepford Wives thanks to spell-bound bubbles oozing out of bottles. Yup, it's up to you, the amorphous blob, to break free and destroy Vadra's power.

This translates as an arcade adventure in true collect, dodge, explore tradition in two colour 3D block style dimensions. However familiar this type of screen display now is, let us not forget that it was *Ultimate*, after all, which pioneered it.

**US Gold** has an intriguing game out soon called *Where in the World is Carmen Sandiego?*

The game itself involves you exploring around the world in search of Carmen (leader of an international gang). What makes it intriguing is the inclusion of the packaging of the 1987 *World Almanac and Book of Facts* (all 926 pages of it), which apart from containing information on almost any aspect of the US economy, demography or sociology you care to think of, is essential to solving the game.

Even if you don't get round to playing the game, think how much use you can break all parties by casually slipping in a few crop export statistics, or what percentage of households own TVs, broken down state by state.

Christina Erskine

NEXT  
WEEKFirst steps in  
machine code

Kenn Garroch continues his series on making a start in learning machine code, with explanations of common machine code instructions.

## Devpac 2

Tony Kendle tries out Hi-Soft's Devpac 2, the brand new assembly language development system for any CP/M machine, and upgrade to the evergreen Devpac.

## Popular election

Take a break from all those politicians on TV, and get down to some real political nitty-gritty with part two of Duncan Evans' election game for the Spectrum.

## Stiffflip and Co

In all the hullabaloo surrounding Palace Software's Barbarian combat game, its other release, *Stiffflip and Co*, has got a bit overlooked. This is a travesty of justice... find out why in next week's issue.

## Locoscript 2

Is this what *Locoscript* users have been waiting for? Faster operations, easier menus? We put the new version through its paces.

# Starglider in TV and arcades deals

COIN OP giant Bally/Sente has bought the licence to convert Rainbird's *Starglider* for arcade use.

Rainbird claims that this is the first UK-originated title to be converted into an arcade game.

The conversion uses the Amiga technology recently bought by Bally for use in its new arcade machines (see *Popular Computing Weekly*, March 27).

It is understood that other Rainbird titles will be bought up for conversion in the near future.

In a separate development last week, Rainbird was officially "chuffed" at the news that ITV children's programme *Get Fresh* is to feature *Starglider* in a weekly competition during its Saturday morning slot.

*Starglider* on TV's *Get Fresh*

The competition is called *Get Mucky*. Two teams compete for the highest score within 50 seconds on two specially adapted Amiga versions of the game.

*Get Mucky* will run three times on every show from May 9th to August 30th - and the winning team will win an A1000 Amiga system for its school.

# TV adventure game first due in September

ANGLIA TV's *Knightmare* is an eight-part series, set in a dungeon, which will be on children's ITV from September 7 (see *Popular Computing Weekly*, March 20).

Devised by Tim Child, it makes great use of sophisticated special effects created by a 24 bit 'Spaceward Supernova'.

The game involves contestants in teams of four, in "a quest with a set of perils and puzzles backed by a professional cast of monsters, wizards, warriors and other 'supernatural' apparitions."

It is not clear which professional monsters are scheduled to appear. But deviser Tim Child did explain why he chose the form of the show.

"A true role-playing game should never play the same twice. A lot of adventure games

*Knightmare*

are based on mapping and solving a maze. This just wasn't good enough for a TV series."

"Competitors won't escape from the *Knightmare* dungeon

that easily. For a start it's irrational - it keeps shifting and changing. And the perils and puzzles change with it," he added.

# ELECTION

**MATCHER**

**NINNOCK**

ARE YOU HONEST, CARING AND CHARMING?  
THEN **ELECTION** IS NOT THE GAME  
FOR YOU.

**PAUL**

**OWING  
&  
PIG-IRON**

RE-DISCOVER THE DARKER SIDE OF YOUR PERSONALITY AS YOU FIGHT OFF THE DETERMINED (AND DIRTY) OPPOSITION TO BECOME PRIME MINISTER AND WIN THE ELECTION!

THIS EXCELLENT ARCADE GAME ALLOWS YOU TO ADOPT THE LEADERSHIP OF ANY OF THE GAME'S FOUR POLITICAL PARTIES. YOU COULD BE MATCHER, NINNOCK, OWING OR PIG-IRON OR EVEN DANIEL PAUL - SELF STYLED CELEBRITY LEADER OF THE 'IDEALIST PARTY'.

CANVASS VOTES, PLACE MANIFESTOS AND SLUR FELLOW POLITICIANS ON THE ROCKY ROAD TO 10 DOWNING STREET.

AVAILABLE FOR COMMODORE 64/128, SPECTRUM 48/128 AMSTRAD CPC ON CASSETTE AT £9.95

# MASTERTRONIC ENDS SEGA SAGA

GAMES consoles were much in evidence at this summer's Consumer Electronics Show held in Chicago last weekend.

Mastertronic's strong presence (it was one of the very few British companies there) was reinforced by its announcement that it has taken on the distribution of the Sega games console in a deal signed last Saturday.

Mastertronic says it plans to launch the Sega machine in September in the UK, at a price of £99.

The company also has access to all 30 Sega cartridge software titles, and will initially release 12 of them this autumn. The plan is apparently to get the machine itself safely into the

shops this year with some software, and concentrating on building up the software base in 1988.

No prices have yet been fixed for the software, but Mastertronic also hopes that third party companies will begin publishing software for the Sega on cartridge.

The company hopes to sell the machine through computer and consumer electronics outlets, toy stores, 'whoever will take it', as one Mastertronic executive is reported to have said.

This news finally settles the long running Sega saga - the machine was originally to have been distributed by Anolasoft, but the two companies apparently could not agree on a pricing policy.

Mastertronic also expressed interest in one of the show's main talking points - CDV, combined music and video compact disc players. Arch budgeteer that Mastertronic is, it's waiting for the price to fall a bit before getting involved.

Also on the games console front, Nintendo, which currently dominates the market, exhibited with a number of new software packages using 3D glasses for added effect. Sega also took advantage of this particular add-on, with a 3D missile defence game (glasses

required).

Atari also took a large stand at the show, where it showed its two PC models in the same configuration as the UK version for the first time - a basic 'consumer priced' PC clone, and an enhanced version with graphic adaptors.

Atari also showed a new disc drive for its 8-bit range. It has three times the capacity of the current model, but will, according to Atari, sell for the same price. Details of availability in the UK are as yet unclear.

The company also launched its 65XE games console to the US consumer, a product previously understood to be exclusively for the European market. In the States, the machine will be bundled with *Flight Simulator* and *Missile Command*, a deal that could yet find its way over here.

On the subject of flight simulators, Microprose US had a real one running on its stand and has promised to bring it to the UK for the PCW show at Olympia, London, in late September.

The show was probably more software than hardware orientated this year - apart from the games consoles and Atari. Commodore did not take a stand for the second year running, and would appear to have written CES out of its show plans.

# PLUS 3 PROSPECTS

Christina Erskine assesses future possibilities for Amstrad's disc-driven Spectrum

**M**ost of the improvements made to the Spectrum over its five year life have been largely cosmetic: upgrading of memory from 16K to 48K, replacement of the rubber keyboard by its clackety clack counterpart, further memory upgrade to 128K (plus improvements to its sound) and the Plus 2, with its proper keyboard and built-in tape drive.

On to the latest, the Plus 3. The addition of the disc drive has been augmented by the installation of the CP/M operating system: the 10 year old standard which has enjoyed a recent renaissance largely thanks to Amstrad. It makes the Spectrum Plus 3 look much more like an Amstrad machine than the Plus 2 did.

The Spectrum computers have now effectively replaced the Amstrad CPCs - the Plus 2 is £150 cheaper than the colour 464, although of course, while the Plus 2 has the tape deck it doesn't have a monitor. The Plus 3 will be £150 cheaper than the colour 6128.

Software houses have been saying for some time that the games market for the Amstrad CPCs is more or less dormant at least in the UK. Many claim that the only thing that makes a conversion of a title to the CPCs worth doing is the size of the market on the continent.

Retailers, too, are less enamoured of the CPCs. WH Smith, for example look set to drop the 464 and 6128 to make room for its Atari STs this month.

Amstrad's 'leisure' computers are now the Spectrum Plus 3 and Plus 3. And looking at the price differential (£100) probably both of them, for while at any rate will continue to be sold.

The test for the Plus 3's success is, as ever, software availability.

While the full range of Spectrum titles was available for the Plus 2, it is rather more chancy on the Plus 3. There is no software on disc for the Spectrum - because the Spectrum has never had an accepted standard disc drive. So while there is software to run on your

machine getting it on the right format leaves you the mercy of the software companies.

They are being understandably cautious.

Further software is likely to be in the form of back-catalogue compilations at least - first it firms do start bringing out their Spectrum games on disc as well as tape as a matter of course, as many now do with Amstrad CPC and Commodore releases the price differential may well stifle Spectrum owners.

They are used to having a pound or two knocked off their version compared to prices for Commodore and Amstrad versions. At the current price - blank 3 inch discs £14.99 will be the norm.

Compilations will therefore be valued for the perception of value for money and lack of risk - software houses.

Then there is the possibility that it will enable companies to produce much bigger better games, because disc access during a game will become feasible and you can use the whole 350K of the disc for the game.

It's an attractive idea, especially since bigger is unfortunately about the only sort of better Spectrum games players look like getting at the moment. The software companies have been woefully short of innovative ideas recently.

Disc access during games has caught on to a certain extent on the Commodore 64 but less so on the Amstrad - curious, seeing that one of the Commodore's major drawbacks is the appalling slowness of its disc drive.

However it is an attractive idea although it must be said that the bigger games promised for the 128K versions of the Spectrum, which have now been around for 18 months or so have never really materialised in any number.

It is more likely that programs will gradually be issued on disc as well as cassette rather than separate versions being developed - perhaps eventually leaving the tape only area to the budget companies.

However it is the combination of proper keyboard and fast storage that at long last makes the Spectrum suitable for use other than as a games machine, interestingly when Alan Sugar bought the rights to the Spectrum in April 1986 it was as a games machine that he saw his purchase.

That there is an interest in small business type use, or for utilities is evidenced by the software that has been produced. Look at *Tasword*, for example. But since Microdrives never took off (even though there were, and possibly still are, those who swore by them, no-one seemed to believe them) any program which requires to store bits of data, say, files, graphics records, whatever, has been a no-no, thanks to a lack of an alternative to tape.

Only the very dedicated user

splashed out on a third party disc drive.

The Plus 3 opens up this whole area to Spectrum owners and potential owners who suspect they won't want to spend 100% of their time playing games.

The question of CP/M on the Plus 3 is interesting. The new DOS has file compatibility built in. Digital Research has agreed that CP/M can be implemented. However this may not mean instant access to all those cheap CP/M programs which have become available thanks largely to the success of the PCW8256.

CP/M expects either a 40 or 32 column screen. The Spectrum has a 32 column screen. CP/M programs will load and run, but you wouldn't be able to use, say *Wordstar*, with its menus.

# Evesham Micros

Don't forget all prices include VAT and delivery

## PRINTERS

Select a printer bargain from Evesham Micros' carefully selected range; chosen for quality, reliability and value. We believe our offers are the best in the country. When comparing prices remember that ours include VAT, printer cable to suit your micro and insured/repacked/delivered. The price you see is the price you pay.

"WHICH" magazine  
BEST BUY

### Star NX-10

Our most popular printer. Our sales now exceed 1,500 units and it's still only three fourths of the way up the sales chart.

- Automatic single sheet feed
- Friction and friction feed built in
- "Front panel" selection of many modes
- Double and quad height characters
- Interchangeable interface cartridges
- Low cost but sharp text option

Ideal for Commodore owners. Buy with the 64128 cartridge and use as a CSM ready printer. If you change your micro you'll buy a new cartridge. In a group test with other popular printers in the price range such as Epson, Citrus and QW, what micro described the Epson as "The Alpha Range of the group".

Only £249.00

Cut sheet feeder available as an option at £63.25

### 15" carriage Star NX-15

Wide carriage version of the NX-10. Most features are the same in particular the quality and reliability offered by Star printers. An exceptionally low price for such a good printer.

Only £349.00

Cut sheet feeder available as an option at £58.00

### 24 PIN TECHNOLOGY Star NB24-15

Part of the new breed of printers. Using 24 pins instead of the conventional 9, a whole new range of dot matrix printers is appearing. These Star models offer the technology, and at our prices are very affordable.

- 1600 dpi draft mode, 720 dpi in NLO1
- Optional font cartridge available
- Auto single sheet feed with friction built in
- Remotely priced cut sheet feeders
- Options of other high tech features

If you want one of the new class of printers then you won't find better quality and value than these.

NB24-10 (80 column) Only £499.00

NB24-15 (132 column) Only £699.00

Cut sheet feeders £63.25 & £58.00 respectively

## Panasonic

KXP-1081

A superb printer for the money. This must be the best sub £200 printer on the market. We don't know of any other £199 priced printer that can match it for print quality, reliability and ease of use.

- Friction and friction feed
- Triple draft and 24 pin NLO
- Epson/BM compatible
- Wide range of print styles

A lot of printer at a very tempting price, you could pay much more than this for much less!

Only £199.00

### Micro P. MP165

A very popular printer that must offer the best second hand print. Upon comparison to the recent that it even uses an Epson ribbon. They will deliver 32 mode that many find it the best in any 8 pin matrix printer.

- 96 dpi draft mode, 360 dpi in NLO
- Friction and friction feed built in
- 24 buffer
- 2 year guarantee

A high specification printer for a very modest price

Only £219.00

### OTHER MODELS

Amstrad MP 2030	£159.00
Amstrad DMP 3000	£179.00
Amstrad DMP 4008	£169.00

Micro P. MP201	£275.00
Star ND15	£439.00
Star NR15	£499.00
Micro P. MP25 (new 26pc 6 pin)	£249.00
Micro P. MP25 (new 26pc 6 pin)	£249.00

Don't forget all prices include VAT delivery & cable

If you would like further details/print sample of any model please send S.A.E.

## AMSTRAD 1512

All prices include VAT & delivery

- Single drive Mono. £489.00
- Double drive Mono. £515.00
- Single drive Colour. £565.00
- Double drive Colour. £789.00
- 20MB hard Mono. £979.00
- 20MB hard Colour. £1169.00

### EVESHAM 32 MEG 1512

We can offer amazing value by upgrading single and double drive models. We use top quality fully guaranteed Miniscribe mechanisms. Formatted capacity 32.5 Mbs. Upgrade to 640K is also included

- Single drive mono 32MEG/640K. £889.00
- Double drive mono 32MEG/640K. £999.00
- Single drive colour 32MEG/640K. £1049.00
- Double drive colour 32MEG/640K. £1179.00

### THE AMSTRAD OFFICE

New generation from Amstrad, includes 1512 QD/M, DMP2000 printer plus Wordstar and Suprasmart. Great value

OUR PRICE... ONLY £789.00 inc.

### THE EVESHAM OFFICE

Enhanced version of the Amstrad Office, as above plus a 20MB hard disk and 16MB memory upgrade. Fantastic value

OUR PRICE... ONLY £1149.00 inc.

### 32 MB HARDCARD

Miniscribe hardcard, ideal for 1512, simple fitting, very low power consumption and a huge 32.5 Mbs formatted capacity. Suitable fully tested and configured to suit 1512.

OUR PRICE... ONLY £389.00 inc.

### UPGRADE YOUR 1512

Memory upgrade to 640K, full test... £19.95

Cypher 20MB, internal tape streamer... £24.95

NEC 387 processor improves speed... £24.95

8007-2 maths co-processor... £199.00

### COPY II PC

Central Point Software's top rated copy program for the 1512 and other computers. Runs many different business programs from hard disk without reference to floppy eg. DBASE, SYSDUMP, LOTUS 123 etc. Latest version... £34.95

Also available from Central Point to PC DOLS, the best features of Norton Utilities, a full DOS interface etc... £34.95

## ATARI ST

520 STFM	£389.00
520 STFM + mouse, 8 drive & 1st word...	£399.00
1040 STFM	£589.00
5M125 16mb mono when purchased with ST	£99.00
5M125 purchased separately	£119.95

Extra £10.00 discount on above if purchased with ST	
Comuna 1meg drive	£149.00
Comuna 2meg (twice) drive	£249.00
All ST computers plus include 5 disks full of software, including word pro, graphics, games, utility and demo programs.	

## AMIGA

AMIGA 550	£539.00
PHILIPS CM8833 16mb colour w/cable...	£289.00
(extra £10.00 discount on above if purchased with A500)	
All A500 computer plus include 5 disks full of software, including utility, game and demo programs.	

## DISKS & BOXES

### 5.25 inch

Pack of 35 DS/DD disks w/covers, (one and labels, closed quality, fully guaranteed)	£13.95
25 disks + box Pack of disks as above plus 10 capacity locking storage box	£22.95
25 disks + box As previous offer but with 100 capacity locking storage box	£24.95
50 Capacity Box High quality lockable storage box. Simulated perforate top.	£10.95
100 capacity box As above but three capacity	£13.95

### 3.5 inch

Pack of 10 DS/DD disks w/covers and labels. Top quality fully guaranteed	£13.95
10 disks + box As above but in 10 capacity plastic library case	£18.95
Pack of 10 DS/DD disks w/covers and labels. Top quality fully guaranteed	£39.95
25 disks + box Pack of disks as above plus 40 capacity locking storage box	£39.95
40 capacity box High quality lockable storage box. Simulated perforate top.	£9.95

## COMMODORE EQUIPMENT

### THE SLIMLINE 64 THE EXCELERATOR+

### COMPATIBLE DRIVE

At least a tiny compatible option to the 1541C. Many advantages over that model not least of which is the price saving.

- Handles disk turbos
- Direct drive motor
- 1 year guarantee
- External 815 switch
- Very reliable
- Compact size
- Very quiet
- Doesn't overheat

Several reviews have appeared on the Exceleator and an have been very flattering. Indeed one reviewer was drawn in comment, "The only thing I could find wrong with it was that I'm a sliker was put on crooked". Price indeed.

RE

# EASTENDERS ON YOUR MONITOR?

Using your TV as a computer monitor is commonplace. Getting TV pictures from a dedicated monitor is rarer. Chris Jenkins tries out Philips' AV7300, for monitors with composite video input.

**E**ternal arguments over who is going to use the television - either for watching it or playing computer games - have become less common as dedicated computer monitors have become cheaper and more easily available. It still seems a pity, though, that monitors don't have the option to pick up TV signals.

Both DK Tronics and Screen Electronics have produced TV tuners which allow you to use Amstrad CPC and other monitors as TV sets, but their design and performance left something to be desired. It's been left to multinational giant Philips to do a really good job of it.

The AV7300 is a very smart, reasonably priced and well-specified TV tuner designed to work with any monitor with a composite video and separate audio input. We tested it with a colour Commodore 1701, and a green screen mono monitor, and obtained excellent results with both. Obviously, the AV7300 is designed primarily to work with the wide range of Philips colour and mono monitors.

The AV7300 is a low, slim unit of 250 x 190 x 55mm, small enough to sit on the

considering the poor position of the Popular offices, but a larger indoor or external aerial can be connected to the tuner if you prefer.

The AV7300 is connected to the monitor by its composite video and audio output leads, there are also video and audio inputs, into which you plug the output from your computer.

The switch on the front of the unit, then, serves the dual purpose of switching on the tuner and routing its TV signal direct to the monitor, switch off, and the computer signal is routed through automatically. This makes it unlikely that you will forget to switch the tuner off after use. Clever stuff.

There are 12 channel preset buttons, each with a selector LED. Each channel can be tuned individually, using small thumbwheels located under a hinged flap. A pointer gives a rough visual indication of the tuning, while each channel also has an automatic frequency control LED which lights up when the signal is at its maximum strength, so it's very easy to tune in for the best local reception conditions.

At the price, the AV7300 is a sensible

alternative to a colour portable TV, which would probably cost you around £149 new and would certainly take up valuable desk space. It may also be a valuable tool for users of more sophisticated computers such as the Atari ST and Amiga, both of which can be used with Genlock equipment to combine video and computer images.

Possibly the only criticism is that the AV7300 has no built-in speaker; there are still many monitors which don't have speakers either, so you would have to take the sound output to an additional amp and speaker set-up.

Other than that the Philips tuner is a highly desirable piece of kit, which should end up gracing the desks of many monitor owners who fancy a break from the spreadsheets or shoot-'em-ups.

**Product Philips AV7300 TV Tuner Micro**  
Any monitor with composite video and audio inputs. **Price** £89.95 **Supplier**  
Philips Consumer Electronics, PO Box 298, City House, 420-430 London Road, Croydon CR9 3QR, 01-689 2166.

**"It may also be a valuable tool for users of... the Amiga, which can be used with Genlock equipment to combine video and computer images."**

most cluttered computer desk, unlike the Screen's and DK Tronics units. It's finished in a computer beige which matches remarkably well with Commodore equipment. The mains-powered unit has a two-arm telescopic antenna. This gave good reception

# A REAL GEM OF A WORD PROCESSOR

GST has now introduced the PC-Gem version of *First Word Plus* word processing system originally out on the Atari ST. Roger Howorth tries it out.

**F**irst Word Plus started life as an update to GST's highly successful *First Word* written for the Atari ST. Like its predecessor, *First Word Plus* owes much of its attraction to the choice of Gem as the host operating system, providing a user interface via mouse and menus.

With the introduction of the PC-Gem version, the Amstrad 1512 or indeed any compatible running Gem can now enjoy this friendly and powerful word processor.

## Features

*First Word Plus* sports a fairly standard list of features but because it runs within Gem text styles such as bold, italic, sub and super scripts and so on are displayed on screen exactly as they will appear on your final print-out. This makes for quite a tidy screen as there are none of the more conventional control codes such as G embedded in your text.

The other more fundamental functions such as block manipulation, search and replace, word count, headers, footers, bookmarks and so on have not been ignored. Indeed these too are all much easier to use because of the Gem Front end, throughout the program the only things you need to type are the actual words in your document.

## Spell checker

More unusual is the inclusion of a 40,000 word spell checker. This can either be used retrospectively, to check a finished document, or in real time, to check the words as you type them. This is quite a step forward because in either mode it is still working from within the main program, which makes the correction, reformat and print process a lot quicker and less painful.

Once the spell checker has spotted a word that isn't in its dictionary the user may then decide to correct the word independently or get some help from the program. The help is provided by the 'dictionary browser' which when called up initially displays the ten words that are closest alphabetically to the offending word. However, as the correct spelling of the word is rarely found in this list the program can then

be asked to make an educated guess at what it thinks the correct word is, but this process can take some time. The results, however, are often good with the program presenting up to a further 10 words for you to pick from.

In addition to the main dictionary, new words can be added to your own supplementary ones which can then be used

**"More unusual is the inclusion of a 40,000 word spell checker. This can either be used retrospectively, or check the words as you type them"**

alongside it. In this way you may have special dictionaries for various subjects, perhaps one for computing terms, one for medical and so on. Alternatively, a supplementary dictionary can be permanently

merged with the main one thus saving a bit of effort and disc space.

Deleting words from the main dictionary is performed in a similar manner, with the word to-be deleted first being added to a supplementary dictionary which must then be edited with *First Word Plus* to place a minus sign immediately before it and finally this list being merged with the main one. Whilst this system is quite the clumsiest I can imagine, I suppose that it is performed so rarely as not to be a major grumble.

## Graphics

Perhaps more attractive still than the spell checker are the graphics facilities. Although they are in themselves basic, when combined with art programs such as Gem Draw are a very powerful tool indeed.

I suppose GST realised that it couldn't provide the huge variety of drawing tools that different people may need so instead it has opted for a system where it provides a desktop accessory that can then be used within virtually all Gem art-type programs to capture a picture straight from the screen.

and save it to disc for subsequent insertion into a *First Word Plus* document.

Operation of this system is very quick and simple. By virtue of the Gem environment, once you have inserted a picture into your document, you not only see it on the printed output, but also on the screen. Of course, *Snapshot* doesn't care what type of picture you wish to store - it could be a complex graphic or a section from your spread sheet - the only limitation is that it must all fit onto the screen in one go. This system of displaying stuff on screen exactly as it should appear on print-out is known as "What You See Is What You Get", or WYSIWYG, and is really very helpful. It must be remembered though that although both matrix and daisy wheel printers can produce different text styles, daisy wheel printers won't be able to print out any graphics that you may have included in your documents.

## Mail merge

Included on the *First Word Plus* discs is the latest version of *First Mail*, which is GST's faithful old mail merging program, again written originally for the Atari ST and therefore making full use of Gem. This has been updated to cope with any graphics in your *First Word Plus* documents and while not particularly startling it is certainly very capable, offering all the usual facilities such as automatic reformatting after merging with or without right hand justification and the ability to not only merge a document with data from disc, but also with live data from the keyboard. In the case of disc files, these can be "nested", that is, one file may refer to the contents of another and so on up to a limit of 20 times.

## Printing

The printer drivers supplied are quite

**"Operation of the graphics system is very quick and simple. By virtue of the Gem environment, once you have inserted the picture into your document, you not only see it on the printed output, but also on the screen. The only limitation is that it must all fit onto the screen in one go."**

remarkable in their completeness, coping very well with the various text style and graphics as well as the old variants of enlarged and condensed character sets. Printing is performed as a background task so that one may continue to edit a document while printing out another.

A good selection of drivers have been included on the program discs so only people with the more unusual printers or plotters will need to configure their own, or preferably persuade their dealer to customise one specially before purchase.

Unfortunately, GST has not provided the facility to alter line spacing on print out, which means that if one is printing out drafts with double spacing you have to work with your document on screen in double line spacing.

## Documentation

The manual supplied is a ring bound, work-you-through guide which is quite thorough and adequately indexed. However there is little technical detail which could make life awkward for those wishing to manipulate *First Word Plus* files in their own programs or indeed configure their own printer drivers.

## Conclusions

*First Word Plus* is quite remarkable in that it is a full function word processor available for the Amstrad PC and compatibles that uses the Gem interface to provide a very user friendly front end to control an unusually powerful program; and to that extent it is highly recommended.

However, because of the hardware limitations of anything but the super fast AT type compatibles, programs running under IBM/Gem perform graphic operations such as scrolling text or selecting menu items at a snail's pace and potential users would be wise to try before they buy to ensure that this will not be unacceptable to them.

## THE ELECTION PROGRAM FROM SOFTEX

by I. A. Skelly

- ★ Mouse driven
- ★ Help screens
- ★ Colour maps
- ★ Analysis by region
- ★ Full print-out facilities
- ★ Four types of "swingometer"
- ★ Graph or tabular display
- ★ Turnout statistics
- ★ Edit facility

<b>Conservative</b>	<b>?</b>
<b>Labour</b>	<b>?</b>
<b>Alliance</b>	<b>?</b>
<b>Others</b>	<b>?</b>

- ★ Displays by maps and constituency colours
- ★ Evaluates impact of tactical voting
- ★ Identifies constituency of any M.P.
- ★ Identifies and forecasts results in marginal seats
- ★ And many other features

Invaluable aid to politicians, schools, colleges, pollsters, political pundits, researchers and ANYONE with an interest in election results and statistics

A complete database of opinion polls and election results since 1900

**520/1040 ST (Colour only)**

**£29.95** (inc. VAT)

Update discs available after each major election . . .

**W**hy use machine code when pretty well all micro computers come with a high level language built in? Well, all high level languages, whether they be compiled or interpreted, are written in machine code at the lowest level. The advantages of 'moving on' to machine code are, therefore, speed and flexibility, since there is no mucking around with commands being converted into instructions that the processor can understand directly.

Inside every microprocessor are a number of registers for handling data, a program counter, and a stack pointer. The capabilities and number of the registers vary from processor to processor. For instance, the 6502 is limited to three main data registers and an 8-bit stack pointer. The Z80, on the other hand, appears to be better off with many more registers, a 16-bit stack pointer, and an alternative register

of memory set aside for use as temporary quick access storage. The main thing to remember is that when putting a byte on to the stack, it is stored at the position given by the stack pointer. This is then decreased by one point at the next byte down in

memory. When pulling something off the stack, the opposite process is performed.

The stack can, therefore, be termed LIFO (Last In First Out) since this is an apt description of the process. The stack can be used by the programmer with push and pop commands (also known as push and pull) but it is also used by the processor for keeping return addresses in subroutine calls. If something is placed on the stack, it must eventually be taken off again to keep the stack balanced and to prevent it from overflowing.

## Flag register

The flag register is used to indicate the status of the processor after an operation. For example, the z (zero) flag will be set (to one) if an operation results in zero otherwise it is reset (to zero). Using the jump and

6502 internal registers

# FIRST STEPS IN MACHINE CODE

Machine code, and the terms associated with it, often seem daunting. Why worry about it, if you already have a good command of Basic? Kenn Garroch begins a new series in which he explains all those strange codes

set. When it comes down to programming, the differences are more a matter of style than capabilities.

## More flexible

The way in which the 6502 accesses the memory is more flexible than the Z80 since most operations can be performed directly on the memory itself. Normally, the Z80 has to load the data into a register before it can be operated on, which means an extra instruction.

All processors have a number of internal sections in common. These are the accumulator or main working register, index registers, a flag register, a stack pointer, and a program counter.

The program counter is used to keep track of which part of the program is to be executed next. In 8-bit processors it is a 16-bit register giving access to 65536 bytes of memory. Putting new values in the program counter allows jumps to be made from one section of the program to the other.

The stack pointer keeps track of the current position of the stack. This is an area

branch on condition commands, the program can transfer control to other sections depending on the state of a flag.

The accumulator is the most important register in any microprocessor. Any addition, subtraction, logical operation, etc., produces a result which is stored in the accumulator. Different processors may have more than one accumulator (the 68000 has eight) but the idea is the same, all results and many operations have to be performed in the accumulator.

The other main registers are for indexing. This is a way of accessing memory using offsets, the value in the index register is added to the address to give the actual address - very useful for tables of data since only the start address is needed, the 10th element can be obtained by placing 10 in the index and loading (the accumulator) using indexed addressing.

The main pieces of hardware common to most micro systems are:

memory - anywhere from 16K to 1024K bytes (1K=1024 or 2<sup>10</sup>);

Z80 internal registers

continued on page 18 ►

# PROGRAMMING FEATURE

◀ continued from page 17

input - keyboard and disc or cassette.  
output - screen and disc or cassette.

The microprocessor has access to all of these and is the main controlling component. The memory is usually split into two sections, Ram (random access memory - sometimes known as read and write memory), and Rom (read only memory).

The only real difference between the two is that the information in Rom is always there and usually contains the program code to start the system up. Ram is only temporary and when the power is switched off, its contents are lost. The Ram is used to hold programs and data that are currently being worked on by the processor.

## Operands

Programs held in memory are a mixture of commands and data. The commands are the most important part since they tell the processor where the data is. Commands are known as op-codes, and the data as operands.

Operands can be either direct data, or a memory address where the data is held (or even the address of an address). At the lowest level these are all 8-bit numbers, since this is the most common method of setting out the memory.

How the processor accesses the memory falls into categories, known as addressing modes and, although these vary from processor to processor, they are

**Implied** - there is not data to be obtained from memory although it is 'implied' that there is, eg.

**CLC** Clear the carry flag

**Immediate** - where the data to be used by the instruction, the operand is held in memory directly after the instruction, eg.

**LDA #2** LDA is a 6502 command to load the accumulator, the # denotes the 2 as being immediate.

**Absolute** - the address of the data to be used by the instruction follows the command is memory, usually a two byte number to give a 16-bit address, eg.

**LDA 1000** Loads the accumulator with the contents of the memory at address 1000.

**Indirect** - uses the address that follows the instruction as the address of a memory location which holds the address of the data to be operated on. Of the actual two byte address, the lowest is usually pointed to first, eg.

**LDA (1000)** if the memory at 1000 and 1001 hold 3 and 2 the actual address of the data is placed in the accumulator is  $2 \times 256 + 3 = 515$

**Register indirect** - is the Intel version of

indirect and the address of the data is held in a 16-bit register (actually a register pair HL or BC, etc), eg.

**LD A,(HL)** The HL pair holds the address of the memory location where the data to be placed in the A reg is held.

**Indexed** - adds the contents of an index register to the absolute address following the command in memory. This is then the complete address, eg.

**LDA 1000,X** if X holds 10 then the address is 1010.

**Relative** - is usually reserved for jumps or branches. The value following the command is an offset that is added to the program counter. The value is signed (highest bit+1 is negative) so only branches of  $\pm 127$  bytes are usually possible, eg.

**BEQ 10** Jumps forward 10 bytes from the current location if the zero flag is set (to one).

Many processors have other addressing modes, but generally they are a mixture of those listed above. The more powerful the processor, the more powerful the addressing modes it usually has, eg. the 68000 has such niceties as auto-increment and decrement.

Kenn Garrod continues this series next week

# Register Loader

Jeff Walker

**T**his machine code program will allow you to load Z80 registers from Basic, thereby enabling the user to call

firmware routines that are otherwise not available

The new RSX's are as follows

*LDA*, n load n into A register  
*LDB*, n load n into B register  
*LDC*, n load n into C register  
*LDD*, n load n into D register  
*LDE*, n load n into E register  
*LDH*, n load n into H register  
*LDI*, n load n into L register

*LD8C*, n load 16-bit n into BC.

*LDDE*, n load 16-bit n into DE.

*LDHL*, n load 16-bit n into HL.

*FWCALL*, n calls the firmware routine at

address n. This should be done after loading the relevant registers using the RSX's above

*REGS* prints the contents of all the registers, including the states of all the flags (use this command in direct mode)

*FLAGS* prints just the state of the flags.

## PROGRAMMING: C64

### Micromon

P A Fairclough

**M**icromon enters its third week with another large chunk of the listing (not much left now) and the remain-

der of the instructions. A table of useful address locations appears next week

#### T - Transfer.

Format T addr,addr,addr,addr

Transfer will transfer a block of memory specified by the first two addresses, to another address, starting at the last address.

This is an intelligent transfer as the block may be copied up or down in memory.

#### V - Verify.

Format V "filename",device,addr

Verify will verify a file which has just been saved. This command is identical to the Load command = format and use.

**IT'S HERE AT LAST!**  
**The show that tells you**  
**everything about the**  
**exciting world of**  
**Commodore computing!**

- \* Test drive the very latest games in the Commodore Games Arcade.
- \* Join in live demos of the new generation of computer music.
- \* Browse through the library of business software in an adults only section.
- \* Meet Jim Butterfield and many other top experts in the Commodore theatre.

**Send for your advance tickets TODAY. With them you can walk past the queues - and SAVE £1 per head off normal prices!**

**10th Official Commodore computer show**

10am to 6pm Friday June 12  
 10am to 6pm Saturday June 13  
 10am to 4pm Sunday June 14

**Champagne Suite & Exhibition Centre  
 Novotel, Hammersmith, London W6**

## Advance ticket orders

Please supply

- ☐ Advance tickets for 2 people £10.00
- ☐ Under 16s tickets for 2 people £5.00
- ☐ Cheques must be made payable to Database Publications Ltd
- ☐ Please debit my credit card and account

Acceptance only

Admission at door: £3 (adults), £2 (under 16s)

10th Official Commodore computer show June 12-14 1987

# PROGRAMMING: C64

◀ Continued from page 20

## W - Walk.

Format W

or Waddr

Walk allows the user to execute a program one instruction at a time starting at the PC or an address if given. The first instruction is not displayed but the second and subsequent instructions are.

If a BRK instruction is encountered then

command is halted and the registers displayed if the STOP key pressed the command is terminated.

When a key is pressed the displayed instruction is executed and the next instruction is displayed.

If 'J' is pressed when a JSR instruction is displayed the whole subroutine is executed at normal speed (don't do it when there isn't

one!). Walk does not use the Breakpoint command.

## X - Exit.

Format X

Exit will exit from the machine code monitor and enter BASIC. I do not guarantee BASIC will work properly.

# POPULAR Computing WEEKLY

**SPECIAL**  
supplement

1987

June

## THE BBC MICRO

### INSIDE

24

**Latest games titles reviewed in depth**

26

**PMS' Genie desktop accessory package**

32

**Music 500 revised and expanded**

33

**Save money on Watford's new mouse**

34

**Spelling checker and graph plotter from Computer Concepts assessed**

While Acorn talks enthusiastically of advanced RISC technology and business systems, owners of the relatively humble BBC B are still finding new and remarkable applications for this popular machine.

In this supplement we look at products which bring the Beeb up into the field of WIMPs, including PMS' Genie desktop accessories, and Watford's mouse and paint program, on which you can save £10 with our special offer.

There's also a look at programs to improve your BBC's document output; Computer Concepts' useful spelling-checker and graph plotter packages.

The long-awaited release of the latest version of the powerful **Music 5000** system is previewed, and as usual we round up the latest games. ◀

### NEWS

#### Chartists

Minerva's latest product, **System Gamma**, claims to be the first programmable business graphics package for the BBC which allows non-programmers to produce sophisticated customised charts.

Formats supported include scatter, histogram, line, bar and pie charts, which are definable in terms of scale, screen position and labelling.

Data can be imported from Minerva's **System Delta** database, and the built-in statistics facility allows standard deviation, line of best fit and other techniques to be applied to the graphs.

Menu-driven, and compatible with BBC Basic commands, **System Gamma** costs £45.00 and is available from Minerva Systems, 60 Sidwell Street, Exeter, Devon EX4 6PR, 0392-37756. ◀

#### Sideset system

**F**M's Genie, reviewed in this supplement, isn't the only desktop accessory program available for the BBC. Just out from Maze Technology is **Sideset**, an 'interactive windowed task-switching system'.

**Sideset** allows immediate switching between the user's main application and the new utilities provided, and also allows switching between two or more different applications; for instance a BBC Basic program and **View**.

The program works by freezing one application and bringing up the other selected in a nested window. The number of tasks which can be suspended at one time is only limited by the capacity of the disc filing system.

**Sideset** comes on ROM and uses the DFS or ADFS disc system on the BBC B or the Master. Utilities provided include diary, calculator, address-book, and notepad, with more in development.

Launch price is \$39.95; contact Maze Technology at 11 Braemar Avenue, Neasden, London NW10 0DY, 01-452 8372. ◀

#### Silver bird

**F**irebird's Silver budget games range continues to support the BBC/Electron, with the latest title **Birdstrike** due out soon. You control an aircraft attempting to shoot down enemy bombers. Each aircraft must be hit exactly in the centre to score a kill.

When enough planes are destroyed, a carrier pigeon is released; shooting this earns you a musical note. Complete the tune on the stave at the top of the screen to earn a bonus and get onto the next level.

**Birdstrike** costs £1.99; more from Firebird on 01-870 6755. ◀

# GAMES TO WATCH

DUNCAN EVANS WADES THROUGH THE LATEST FLOOD OF BIG NAME GAMES FOR THE BBC

## PHANTOM

**I**t doesn't take much to work out where Dave Croft got his inspiration for *Phantom*. *Phantom* sports graphics depicted from directly overhead, where

nasty ghosts and beasts lurk in gloomy corridors and you, as Professor of Astro-Physics must destroy the lot of them with your experimental nuclear accelerator.

That's the plot in a nutshell really. You must clear the four buildings of all things supernatural by frying the fiends.

Control is by keyboard or joystick, and consists of four movement directions and fire. The problem with your nuclear blaster is that it runs out of power fairly quickly, so collection of spare isotope power packs is essential. The other thing to watch out for is your heart rate. Too much contact with the netherworld spirits will send it over the 100 BPM limit. This is fatal.

While graphics and animation are reasonable, the sound effects are pretty rudimentary, adding little to the action.

It's quite easy to get past the first

couple of screens, but then your heart starts to fail with alarming regularity. In order to get anywhere you must be as fast as possible and avoid those clammy touches. Should you wait, pondering your course of action, then in the twinkling of an eye you'll be knee deep in all things ghostly.

If 2D arcade maze shooting games are up your street then I think you'll find *Phantom* just dandy. ◀

**Program** Phantom  
**Price** \$6.95 (cassette), \$8.95 (disc)  
**Supplier** Tynesoft, Unit 3, Addison Industrial Estate, Blaydon, Tyne & Wear

## THE BIG K.O.

**B**oxing games may not be the in thing anymore, but there aren't that many out on the BBC so Tynesoft's is certainly welcome.

*The Big K.O.* pits you against either another human player or against any of eight computerised foes. The keys, which are redefinable, used in play are left and right, and arms up or down, and punch. If you hold your gloves up it protects your head, while holding them down protects the body. Alas you must hold them in a

middle position in order to punch.

After sitting through the introductions, which tell you which type of punch each boxer is best at, and can be turned off anyway, the ring appears and a pair of boxing gloves start the contest.

The fight lasts for three rounds or until one boxer is flattened, whichever happens first. If there's no knockout then points decide the winner. For each round a boxer has a certain amount of energy which diminishes every time a punch is thrown, and more substantially when you are hit. If your opponent's energy runs out first, you can beat him senseless because he cannot defend himself.

While the large sprites do tend to plod around rather than dance like a butterfly, the animation is flickerless and the action fast, furious and funny. Recommended. ▶

**Program** The Big K.O.  
**Price** \$6.95 (cassette), \$8.95 (disc)  
**Supplier** Tynesoft, Unit 3, Addison Industrial Estate, Blaydon, Tyne & Wear

## MAGIC II

**S**ince the success of the *Magic I* collection, Micropower has decided to re-issue some more of the back catalogue in the form of *Magic II*.

For a reasonable eight quid you get a disc containing ten Original Hits, as it says on the package. Ah yes, *Junior Maths Pack*, I remember the queues that formed for that one. That, *World Geography* and *Helldriver* are really just a waste of space.

*Positron*, *Banbits* and *Frenzy* are average clones of *Space Invaders*, *Fighter Pilot* and *Quix*.

The best is undoubtedly *Mr Ee*, based on *Mr Do* from the arcades, and is excellent. The graphics are bright and colourful, the tunes are jolly and enhance the action (and can be turned off), and the game itself is addictive, challenging and entertaining. You can't ask for more than that really.

*Cybertron Mission* is a one player

## IMOGEN

Imogen combines elements of other styles of games and fuses them together to produce a game that could have been quite good.

The idea is that Imogen, the mighty wizard, helped destroy a great evil, but the strain was too much and he went bonkers. An even bigger wizard imprisoned him and split the spell for his

release into sixteen parts, which he would collect when his sanity returned, and thus be able to escape. Great idea, isn't it? I think we should try it out round at the Maze.

So that's the quest, find the sixteen bits and escape. The game is presented in 2D platform and ladders style, with lots of leaping to and fro to get round the obstructions. To help you do this you can mutate into a cat (good jumper), a monkey (great climber) and back into your own good wizardly self (for

spellcasting and using objects)

The trick to Imogen is to use the right character at the right time, to get round the problems. What's disappointing about Imogen is the quality of graphics, animation and sound. The sound is minimal, so forget that. The graphics are presented in monochrome (Mode 1). To compensate for the lack of colour you'd expect to get a good deal of detail. Unfortunately, not so.

The animation is well, unforgivably

bad, there's hardly anything else moving on screen, and yet the sprites flicker when moved and you can see the background through them. These points really do detract from an otherwise decent game. ◀

**Program Imogen**

**Price** \$9.95 (disc) **Supplier** Micro Power, Northwood House, Leeds LS7.

## STARQUAKE

With a hero called Blob I don't think the folks at Bubble Bus are being entirely serious on the plot aspect of Starquake. It runs along the lines of "unstable planet emerges from black hole on edge of galaxy, unless middle of planet re-built, then boom." Book your seats for the fireworks.

Basically, it's an arcade adventure set in space, although the scenery is so nondescript it could be in the bottom of your garden and you'd never notice. You move Blob around, firing at hostile things until your Neverready battery runs out, and collect the objects which are scattered about.

What you do then is anybody's guess because the instructions certainly offer no insights. There are five hundred rooms to zip around, so there's plenty to explore.

Teleport pads and flying platforms add to the complexities involved; you'll certainly need to make a map!

Although the Beeb's limitations mean that the graphics and sound are inferior to those of the CBM64 and Amstrad versions, there's a good game hidden away in Starquake: pity it's a bit pricey. ◀

**Program Starquake**

**Price** \$9.95/£11.95 **Supplier** Bubble Bus Software, 87 High Street, Tonbridge, Kent TN9 1RX.

Gauntlet style game from a few years ago, nothing special in the sound or graphics department but good fun nevertheless.

The remaining two, Chess and Felix (platforms and ladders), are both routine implementations and quite playable in their own right.

If you don't have Mr Ee already, then this collection is worth buying just because of that one game. ◀

**Program Micropower Magic II**

**Price** £7.95 (disc) **Supplier** Micropower, Northwood House, Leeds LS7

One of the features of many sophisticated micros is the ability to utilise desk top accessories. That is to say, routines incidental to the main program which can be called upon at any time, perform a function, then disappear again, without affecting the main program at any time. A few examples would be a calculator, address book and notepad.

For the hard pressed serious BBC user Permanent Memory Systems of East Kilbride has produced **Genie**, a hardware and software equivalent.

# WISHES GRANTED

The software simply consists of a 'Genie Formatter' disc, and only needs to be run once with the hardware in place in order to correctly configure it. Once this is done the disc can be disposed of as you wish!

The hardware part of Genie consists of a small plastic box with a trailing lead which connects to a Rom socket on the BBC's circuit board. Inside the plastic box lies 32k of battery backed Ram in which user data is stored, a 32k Eprom containing the system software, and an additional 32k of Ram which is used by the system software. All of this appears to the computer as a single 16k Rom.

The actual facilities offered by Genie are an address book, desk diary, notepad, phone book, calendar and calculator.

The utilities can be called up at any time, regardless of what mode the computer was in at the time, by pressing Control-Shift-G or entering 'Genie' if permissible. Once called, the main menu, which is pleasantly designed, appears with the options listed down the left side, the main work area to the right of it and the function key strip along the bottom.

## DUNCAN EVANS REVIEWS PMS' IN-GENIE-OUS SOLUTION TO THE PROBLEM OF IMPLEMENTING DESKTOP ACCESSORIES ON THE BEEB, AND FINDS THAT AT LEAST SIX OF HIS WISHES ARE GRANTED . . .

First accessory on the list is the address book which lets you enter surname (24 characters), forenames (14 characters), address (six lines of 30), telephone number (15 characters) and sundry comments in the details box (two lines of 30).

Once the information is entered it is automatically sorted, and you can now browse, work, find, print label or go to the calendar or calculator. Pressing Escape stores any new data in the permanent memory, ready for recall the next time Genie is accessed.

Before you call up the calendar accessory it's a good idea to go to the options menu first and set the date. While

there you can change the colour scheme if so desired, and also set a password to keep prying eyes out of your Genie files.

Having set the date you can wander through the 99 year calendar, looking for particular days or whatever. You should note that the calendar can be accessed from the address book, notepad and desk diary.

The second

facility, the notepad, lets you browse through the clearly labelled pages (16 lines of 40 characters), scribble away word processor style (ie automatic word wrap), find a page and print a page.

The desk diary is quite easy to use, and commences with you being offered the chance to enter some reminder for the current day. Whether you take up the offer or not you can either browse through the days or press F9 to display a calendar of the current month. Any dates containing a diary entry are now

highlighted. As usual you can print out any particular diary page you desire.

The calculator is perhaps the only accessory which is slightly disappointing, as it features few powerful functions, merely the standard add, divide, subtract, multiply, a few memory manipulating options and a couple of minor functions. There are two non-standard features to call upon but these don't actually have anything to do with the calculator. These are an Ascii table and a unit converter.

Moving on we come finally to the phone book. This is not a true accessory, rather a sub-section of the address book, as it contains, in alphabetical order, the names and phone numbers of the people whom you entered in the address book itself.

### Memory

One of the very best features of Genie is the battery backed Ram in which it stores all the data. No messing about with data discs here! So, it goes without saying that you're going to need to know how much of that precious memory all your entries are consuming and how much space you've got left. Naturally, PMS hasn't omitted this feature from Genie, and calling the status screen will give you the low down on memory consumption.

The documentation accompanying the package is comprehensive, well laid out and actually comprehensible. Full marks to PMS on that score. All the accessories are easy to use, and while they may not be the most powerful collection ever assembled they are all useful. With the battery backed Ram making life even easier, the most impressive thing about Genie is the way it rapidly becomes an integral part of your BBC system. Well designed and well worth a look. ◀

## QUEST MOUSE

The ultimate in Mouse technology, the Watford Electronics Quest Mouse. This package must be the most powerful Mouse package yet produced for the BBC Micro. Featuring state of the art 32K ROM software the Quest Mouse package is filled with features revealed by the leading artist looking for the most powerful drawing program, where:

The Quest Mouse is FULLY HARDWARE COMPATIBLE with the AMX MOUSE so that programs such as AMX PageMaker etc. will work with it. The two parts of the Quest package are available separately so that existing Mouse owners can upgrade to the Watford Quest Paint software and so that users can also run all replaced for experience.

The Mouse features high resolution 50 FPS operation. It has a rubber ball for maximum accuracy and has three buttons to allow a mouse's range of options to be accessed without touching the keyboard.

### SPECIAL INTRODUCTORY OFFER

QUEST MOUSE & QUEST PAINT	£59
QUEST MOUSE ONLY	£35
MOUSE WATS	£5
QUEST PAINT SOFTWARE	£34

(Quest Paint supplied complete with Software in a 32K ROM, User Guide and Utility Disc)

IPS: The Watford Quest Mouse is FULLY Compatible with the AMX Mouse, therefore all AMX Software will work perfectly with it!

## TRIVIA TIME

### The All New Trivia Quiz Game For All BBC Micros

This new TRIVIA GAME is not at all trivial. It contains 1000 multi-choice questions on a vast range of subjects. From pop music to television, all are covered.

Once a question has been answered correctly you then get to play the computer at what the Americans call "Tic Tac Toe". (See War-Games). The outcome of which depends on how well you answer the questions.

## £50 PRIZE

To the person who scores the most points.

**All This For Only

**NEW!**

# GENIE Your wish is my command...

The Genie System  
only  
**£69.00 + VAT**  
(£78.30 inc. VAT  
plus £1 carriage)

Address Book - Desk Diary - Calculator - Calendar - Phone Book - Notepad.  
**Instantly - at any time - Magic??? No, just call GENIE!**

How often do you interrupt important work on your computer to use a calculator, look up your address book, consult your diary or make a note of something?

Have you ever wished for an invisible helper, just waiting there in the shadows, behind whatever program you are using, ready to appear as if by magic, whenever needed?

### GENIE - YOUR HELPER, HAS ARRIVED!

GENIE is a revolutionary new system which puts at your day-to-day information instantly at your fingertips.

A single keystroke will call up GENIE from WITHIN a wordprocessor, spreadsheet or other application software - so need to save your work - GENIE appears instantly on screen.

When finished, another keystroke makes GENIE vanish, immediately dropping you back to EXACTLY what you were doing. Before you called GENIE.

GENIE is a totally self-contained system requiring no access to disk. It is present in your computer from the moment you switch on.

### THE SOFTWARE

The GENIE System software - 32K of machine code - has an original screen display, using high resolution windows with up to 7 colours on screen, AND 80 column text display. The screen colours are user selectable to give optimum clarity on any monitor.

GENIE provides a 10 digit calculator with memory, a 100 year calendar, address book, desk diary, notepad and phone book. Information can be accessed by keyword, or by fast search techniques. The notepad is a mini wordprocessor with word-wrap, and full cursor editing.

### THE HARDWARE

GENIE lives on a single circuit board only 3 inches square.

The GENIE System hardware uses a totally new memory paging technique, developed by PMS, which maps 32K of ROM and 64K of RAM into the address space of a single 16K sideways ROM.

The GENIE board is connected to the computer via a single header on 6 inches 50 ribbon cable. The header plugs into any ROM socket on the main BBC MASTER or COMPACT board.

■ All things leads - ■ soldering - NO modifications.

GENIE can produce address labels, and pages of the diary, notepad can be output to a printer.

In addition to these, stored in GENIE's memory are ASCII tables and lists of commonly used conversion factors, an index to internal units.

All the whilst in GENIE are MENU DRIVEN, making full use of cursor and function keys.

# Readers' Survey

**T**his is where you get your chance to have a say in shaping *Popular Computing Weekly*. We need to know what you like about the magazine, what you don't like, and how you want us to continue to serve your interests.

And it's not just us who can benefit from sending in this survey, but you as well.

Firstly, it needn't cost you a penny - just send it off to the Freepost address given here and at the bottom of the next page. Secondly, we've got 250 copies of Superior Software's *Success in Software* booklet - tips on how to write commercial programs - to give away.

You'll notice that our last question asks for one way in which you think *Popular* can be improved. The 250 most sensible and attractive suggestions will get the booklet.

Please fill in all the sections of the questionnaire. Incidentally, if you filled out last year's survey, please don't think we don't need your views again, even if they haven't changed. We do!

The completed form should be sent to PCW Readers' Survey (Inter-Mediate), Freepost, Sawbridgeworth, Herts CM21 9YA, to reach us by Tuesday, July 7. We will publish the results in a future edition of the magazine.

**SPELL**  
*Master*

Spellmaster contains 59,536 separate English words  
stored in 131,072 bytes in one chip

- Compatible with all BBC models
- Works with INTER-WORD, WORDWISE PLUS and VIEW
- Checks spelling at up to 10,000 words per minute
- Checks text as it is entered

## SPELL-MASTER ROM

This is the first completely ROM based spelling checker in the world. As a result it out-performs all known spelling checkers on this machine or any other micro-computer. The single 128K EPROM contains over 59,000 separate words and 22K of program.

### Compatible with all BBC Micros

Special switching techniques ensure that the 128K ROM appears to the machine as one single 16K ROM - this guarantees that it is completely compatible with the ROM sockets in all versions of the BBC Micro-computer.

### Compatible with all the major word processors

SPELL-MASTER has been designed to fully integrate with the most popular word processors on the BBC, WORDWISE and WORDWISE PLUS. VIEW and of course INTER-WORD. While editing in these word processors all that is necessary to control SPELL-MASTER is to press one CTRL key (Usually CTRL-J). This causes a menu to appear listing a variety of options such as 'Check entire text', 'Check word at cursor', 'Continuous check - on/off' etc. Text is checked directly in memory while in the word processor. There are even short-cuts to the menu, for example, pressing CTRL-V in any of the above word processors will start checking the text immediately from the current cursor position. Compare this with the process of checking text in the most highly rated competitive product - VIEWSPELL.

VIEWSPELL	SPELL-MASTER
<ul style="list-style-type: none"><li>• Save text from word processor.</li><li>• Enter spelling checker.</li><li>• Load text into spelling checker.</li><li>• Check the text.</li><li>• Go back to word processor.</li><li>• Load marked text.</li><li>• ... finally, make corrections.</li></ul>	<ul style="list-style-type: none"><li>• Press CTRL-V</li><li>• make corrections.</li></ul>

### Check entire text

In a word processor, SPELL-MASTER can check at up to 10,000 words per minute. Whenever a word is indicated as misspelt the user is given three simple choices. Replace the word with another selected from the dictionary. Ignore the word altogether or add it to a user dictionary.

### Check as you type

Because the dictionary is ROM based it is possible to check words as they are typed. This feature works with all the above named word processors and does not slow the operation of the word processor at all. Whenever an

incorrect word is entered the computer will beep, the word may then be corrected or simply ignored.

### User Dictionaries

SPELL-MASTER supports extensions to the main dictionary in sideways RAM or ROM. This has the advantage that there is no speed degradation when checking against user dictionaries, since there are no disc accesses required at all. Once a word is added to a user dictionary it is treated as if it is present in the main dictionary.

SPELL-MASTER can support a number of separate dictionaries at once, each sideways RAM or ROM holding up to 3000 additional words. Once a dictionary has been created it can be burned into an EPROM to form a permanent extension to the main dictionary.

Provision is made for editing any dictionary extension, for adding or deleting words in bulk, and directly loading or saving user dictionaries from or to sideways RAM.

### Additional star commands

These can be issued from any language ROM such as spreadsheets or BASIC (they can even be included into BASIC programs). Some of the 8 commands are:

• **CROSSWORD** - Will search the entire dictionary for words that exactly fit the search pattern. For example \*CROSS, \*\*M\*U\*E\*R would list ARMOURER, COMMUTER, COMPUTER. It takes about 8 seconds to check against all 59,000 words.

• **ANAGRAM** - Will list all the words in the dictionary that contain the same letters as those specified.

• **FUZZY** - Will list all words that sound something like the one you are searching for. If you are not sure of the spelling of a word then entering the approximate spelling here will generally list the word you are looking for.

**Price: £59.00 incl.**

### Upgrades

Owners of the older two chip versions of SPELL-MASTER can upgrade to the single chip version for £25.00. However this new version is functionally equivalent and so it should not be necessary to upgrade.

### 2nd processors

Due to its unique design SPELL-MASTER will not work with word processors running on the 6502 2nd processor, although there are facilities provided for checking long text files.

Computer Concepts

# MUSIC NON-STOP

**H**ybrid's Music 500 is a well-established music add-on for the BBC B which competes directly - but using a completely different approach - with Yamaha's CX5 MSX Music Computer. Recently the 500 received a major update and the new system - dubbed Music 5000 (£161 or £89 as an upgrade) - boasts many additional features and improved sound quality, thanks largely to software rather than hardware changes.

The new software has also made it possible for the system to respond to a conventional music keyboard, and this has been launched as the Music 4000 (£169 with software).

Confused yet? There's no need to be, because the Hybrid system is now more comprehensive and yet more straightforward than it's ever been. The system includes a hardware element which contains the 16 voice channels (although the sounds themselves are generated in software) and until now the

only way to create music was to use the programming language AMPLÉ.

The main command in the AMPLÉ vocabulary is MAKE. If you type in a series of notes together with the sound name you require, the correct octave and so on, and then type MAKE, the computer remembers all these details under a single name - perhaps INTRO. Then you simply have to enter INTRO any time you want this piece of music to occur.

In the Music 500 system there were no preset sound parameters, and in Music 5000 there's nothing but preset sound parameters. This isn't the disadvantage it sounds - instead of having to treat Music 5000 as a synthesizer with a lot of continuously variable controls, you're given a limited but comprehensive list of various options for envelope shape, pitch envelope and so on, and the combination of these creates a new sound.

The sound quality is similar to that from a good Casio home keyboard, with

the additional ability to stack, detune and otherwise alter sounds for much more powerful effects.

The 5000 software has various control options, including a Mixing desk, a Recorder, a Music Slave, and so on. You can type notes onto the screen and see them notated in AMPLÉ, alter the stereo pan, volume and tone of eight voices while playing back live, and record a performance in real time. This last option has been added to work with the Music 4000 keyboard.

The keyboard is similar to the Symphony released a few years ago, and probably has the same Italian parentage. In fact, it's possible to upgrade a Symphony to use it with the Music 5000 for £47.

In Split mode each key produces a different sound, repeated in each octave. This is ideal for playing a "kit" of drum sounds while you're programming a piece, and in fact the drum sounds available are surprisingly powerful (you won't be able to link up an external drum machine without some fiddling with the RS432 port so they need to be).

Overall the 5000 system is very flexible, and with the addition of the Music 4000 keyboard it will appeal much more to players as well as programmers. MIDI and better drum synchronisation will be added using the Music 2000 interface to be shown at the Acorn User show, but Hybrid still prefers to regard its products as comprising a complete stand-alone music system.

Hybrid is also keen to disassociate itself from Peartree's Music 7000, which appears to be a warmed-over Music 500. However, it does offer an early version of AMPLÉ (on cassette) combined with a modified Mixing Desk page, a Sound Shaper page for creative synthesis which is much more visual than the Music 5000 approach, the ability to print out the music score (although Music 5000 can do this too, if you have a print ROM), lightpen and mouse compatibility, and so on. You can upgrade a Music 500 (now being given away free with the Master series by some dealers) to a Music 7000 for \$39.95, or buy both hardware and software for £70.85, but no deliveries will take place until after the Acorn User show at the end of July. ◀

# PAINTING NUMBERS

WATFORD'S MOUSE SYSTEM LOOKS SET  
FOR SUCCESS. READ ON FOR A GREAT OFFER...

**F**or a long time the AMX mouse system has ruled supreme on the BBC computer, but now there is a new challenger. Watford Electronics has released a combination of mouse and Rom based graphics software for the reasonable price of \$89 (ex VAT).

What you actually get for your money is a well built, three button mouse (far superior to the AMX mouse), 32k Rom, 62 page manual and a utilities disc.

After installing the Rom, \*Paint calls it up and you're ready to go. On the mouse, the left button executes the current option, the middle runs through four utilities, and the right accesses the menus.

There are two menus available, one at the top of the screen, the other at the bottom. The top menu is the command menu and contains options for pencil, brush, airbrush, replace, fill, cut, line, triangle, rectangle, polygon, ellipse, cut and paste, text, trace, clear screen, undo, input-output, a few special effects options, and a utilities sub-menu.

Many of these facilities are dog standard implementations, but it is worth noting that when using the pencil the drawing action is smooth and responsive. You can vary the thickness of the pencil from one pixel to four pixels wide for really thick drawing. The magnification factor can in fact be applied to most of the other options.

Designing brushes is not explained in the brush section of the manual, but under the palette section. It's complex stuff, so careful reading is required. You start off with a square brush 16 by 16 pixels, so if you want a circular one you have to load it off the utilities disc, which also contains patterns for fills.

The airbrush is quite nice. Although based on a square shape, the dots appear in the middle and radiate out in a circular fashion. You can change this if you like. One thing missing here, though, is the option to alter the rate of spray from the can. It is noticeable when on maximum magnification, that the speed of spraying slows down by a fair amount.

The cut and paste options are quite interesting and can be used to create some very clever patterns. Among the options are the silhouette which can be used to

give objects shadows, the reflect which causes the content to be rotated about the y axis, a scaling after cut option, and the ability to rotate the image. The image can be rotated to 90, 180, or 270 degrees but not any angles in between. Also missing is the ability to distort an image by rescaling only one side of the square. If you want to change the size of the image by a fixed factor there are options which make sure that you end up with a quarter size image, not 0.289 or some such oddity.

The text options are used for placing text on the screen in any of four fonts. One is the standard set, one is double sized, and the other two are italicized versions thereof. The facilities offered on text styles are not very comprehensive, so there is the additional option of loading up user defined fonts.

You can lock the size of text being used so that it doesn't get squashed when you're fitting it into a specified area, and you can also have it printed vertically for labelling graphs and the like.

The features that pull this paint package out of the average category are the utilities in the command menu and the options on the palette menu. These include setting colours as transparent, protecting specific colours from being overwritten, setting up a cycle of colours, lock a pattern on the screen or have drawn exactly at the cursor position.

Besides the four start up colours, the program uses mode 1, which can be changed, there are four shaded colours to select from as well.

One final point to mention, apart from the fact that there is still more to the program than I have been able to fit in, is that the Watford video digitiser is supported and digitised images can easily be imported.

Overall, the combination of a quality mouse and decent art package gives Watford Electronics a real chance of supplanting AMX as mouse supremos. ◀

POSTCODE: .....

PLEASE ALLOW 28 DAYS FOR DELIVERY

**N**obody's spelling is perfect. Even Christina Erskine makes mistakes sometimes. If your favourite word processor doesn't have a built in spelling checker, then your only recourse previously would have been to a dictionary, or a disc-based spelling checker. Not any more though.

**Spell Master**, by Computer Concepts, is a Rom based spelling checker which is directly compatible with **Wordwise** (and **WW+**), **Inter-Word** and **View**. By that I

mean that **Spell Master** can co-reside with any of those programs, and be called upon to check the text being prepared in any of them.

On the facts and figures front **Spell Master** comes on a 128k Rom which the BBC views as 16k, it has a dictionary of approximately 58,000 words and checks text at around 10,000 words per minute.

### Spelling

When in the middle of a document, nothing could be easier if you want to check out a spelling. Simply press Control J and a small window appears offering to check entire text, check marked section, browse, check from cursor or turn immediate check on. Once the checker is called into operation then the computer queries what it thinks are dodgy words and offers to ignore, add word to dictionary or correct word. Assuming you want to correct the word you are offered a list of probable replacements and the chance to enter your own spelling if needs be.

The point about adding words to the dictionary is that you really need to build them up and then have them stored on an Eprom to make efficient use of **Spell Master**.

Should you not have any of the aforementioned word processors, then you can utilise **Spell Master's** secondary method of operation which is to read a file off the disc into a text editor. Once you

# FACTS AND FIGURES

**SPELLING CHECKERS AND GRAPH PLOTTERS ADD THE FINAL POLISH TO YOUR BBC'S DOCUMENT OUTPUT. DUNCAN EVANS ASSESSES TWO SUCH OFFERINGS FROM COMPUTER CONCEPTS; SPELL MASTER AND INTER-CHART**

have the text loaded you can check for mistakes as usual but also use rudimentary word processing features, similar to those on **Wordwise** in fact, to tidy up the text again.

A couple of extra commands worth noting are 'Anagram' 'text', which searches a string for recognisable words, 'Browse' 'word', which allows the browsing through of the dictionary from other software such as Basic, 'Check' 'text' for displaying similar words, and 'Crossword' which helps find missing letters in unknown words.

If you undertake any substantial measure of writing, and spelling is not your strong point then **Spell Master** can be recommended to help you on your way.

**Inter-Chart** is another in the Computer Concepts range of applications Roms, and deals with turning turgid data into easily digestible graphical displays.

The package itself consists of a sturdy box containing a 16k Rom, instruction manual, function key strip and a reference card.

The data used can be entered directly at the keyboard, loaded from a file or ported across from a Rom-Link package such as **Inter-Sheet**. When used for the first time you would probably go for Option 5 on the menu, which selects a new set of data. Up to sixteen data sets can be used.

After deciding on a name for the data set, you must decide whether to have a label type graph or a scaled graph. Data for scaled graphs consists of entering x,y values whereas a labelled graph uses a value and a corresponding label. Whichever is chosen you are sent to edit

mode where the data is entered and, somewhat confusingly drawn and redrawn.

You can now have the graph replotted in either a bar graph, line graph or pie chart format. If you have more than one set of data to be displayed, then you can have comparative graphs.

One useful function, especially when using a pie chart, is that of highlighting one piece of data. In the pie chart display that piece of the pie is cut out. Also you can also have the sections labelled with

percentages rather than simply numbers.

Headings are catered for by letting the user specify the text, then place it anywhere on the screen. As well as the standard colours according to the mode in which you are working, there are also shaded colours to help differentiate between units of data.

Should the chart produced still not look right, you can change a number of options relating to how the x and y axis are scaled. And just in case those dots on a graph are not noticeable, you can implement a feature whereby each point is marked by a visible cross. Alternatively you could opt not to have the points connected up.

### Printer

Once a graph is suitably displayed, labelled and coloured to your satisfaction you can save it or print it out if you have an Epson compatible printer.

While **Inter-Chart** is not the most powerful data to graphics program, it is suitable for non professional use of any description, wherever anyone wants to make data look less like gobbledegook and more like something readable. ◀

**Products** **Spell Master**, **Inter-Chart**  
Price £59, £36.90

## Popular Election

Duncan Evans

**F**ollowing on from the scaraway success of the Popular Superbowl listing, Duncan Evans (that's me) suffered another all-night programming session to produce a board game to play as your real hopes crumble.

The listing will be spread over lots of weeks so start typing now. First up, most of the rules on how to play.

Three players take part, either computer or human, and must spend six weeks on the campaign trail round the board. At the end of every week the opinion poll is updated and at the end of the campaign an election night special is featured.

Although most of the options on the boards are explained in the centre panel you must take care not to spend your campaign money too early. After going round the board you receive 15k from Central Office; there are other opportunities to gain more money.

One of the first things that you are asked is for campaign manifesto. Press a number corresponding to the following policies in each department.

### Education -

- 1/ Massive investment in staffing, training and equipment.
- 2/ Large staffing increases, moderate investment.
- 3/ Moderate scale all round investment.
- 4/ Minimal staff support, no new investment.
- 5/ Snp. Slash spending on education.

### Economy -

- 1/ Reflation of economy. Vast amounts of money poured in.
- 2/ Moderate and careful investment.
- 3/ Stringent control of money supply.

More stuff next week including defence policy and health.

## Font Designer

Steve Turner

**T**his font designer, presented over two weeks, can be used to change the text or create user defined characters

for a SuperBasic channel.

If you require a user defined font, load it into memory and use the following to activate it.

Char channel, font address.

Note that the data must be in two parts using the standard format, starting 900 bytes from the start of the first.

First install the new SuperBasic command by typing in listing 1. Save the code

with \$Bbytes mdvi\_Char\_Dat.c,190. Once done, try installing the extension with Call c. If all is well the extension can be used in your own programs with code like -

100 c=Resp(190):Lbytes mdvi\_char \_dat.c:Call c

The font designer will install the extension itself when run.

The instructions relating to listing 2 appear next week.

## Stumped on Amstrad

J. Amfield, of Hindley, Wigan, Lancs, writes.

**Q** How the 42nd Lancashire Fusiliers does one enter the mnemonics into a computer?

From time to time I have read articles on machine code in various magazines and even have a book on Amstrad m/c language for beginners.

Well, I understand binary, hex, oct, and decimal. I can calculate one to the other without the computer.

I know the parts of a computer, I understand peeks and pokes, and I've read about registers, etc. I can enter machine codes using data statements etc. Then from there on, a full stop.

Typically, an author writes, "from here on the m/c programs will be written down in mnemonics", but they forget that thick heads like myself do not know how to enter them into the computer.

I see LD H, 45C, then as soon as I enter this, and before I can proceed further, the computer returns a syntax error.

What is omitted? I understand that I shall need an assembler eventually but I don't want to lay out good money until I know what I am learning.

**A** You really shouldn't take the Fusiliers' name in vain when there are better words that can be used.

I'm afraid that you will have to get an assembler if you want to

use machine code mnemonics with your Amstrad.

Normally, the Amstrad works in Basic and will only accept Basic commands (PRINT, GOTO, etc.) Mnemonics are used to represent the numbers that the processor understands as instructions.

An assembler is used to translate them into the correct code numbers, and take care of such things as branches and jumps to labels. The assembler is a separate program that you load into your computer to do this translation. It cannot be done directly from Basic.

If you have a disc drive with your Amstrad then you will undoubtedly have CP/M which includes an 8080 assembler ASM.COM.

This expects files of mnemonics and assembler commands which it then converts into machine code that the Z80 can understand.

The 8080 instructions are included as a subset in the Z80 command set so don't worry about the processor appearing to be different.

To use the assembler you will need to create the file containing the instruction mnemonics with a wordprocessor or ED.COM though the latter is a little difficult to use. Once you have the file from A> type **ASM file** (the file you created is file ASM). Then when the assembly is finished type **LOAD file**. This creates a COM file which can be run by typing its name.

A few weeks ago, Peek and Poke referred to DDT which also includes an assembler which, though simple, will give you a taste of the difference it makes to use mnemonics.

If you don't have a disc drive then you are stuck with data statements until you can get an assembler (unless of course you write one in Basic).

The HiSoft assembler is quite good as it uses all the standard commands and includes an editor.

## Sorting out the Amstrad

J. Jamson, of Rhosmor, Mold, Clwyd, writes:

**Q** I am having trouble with a sort program on my Amstrad. The program is written in

Basic and sorts an array of strings.

Some of the strings contain numbers at the beginning. The problem is that the numbers do not appear in order. Is there something wrong with my sort routine or have I gone about the whole business wrongly? An example of the method is

```
10 DIM A$(20)
20 FOR T=1 TO 20
30 A$(T)=STR$(T)+CHR$(T+54)
40 PRINT A$(T)
50 NEXT
60 F=0
70 FOR T=2 TO 20
80 IF A$(T) < A$(T-1) THEN GOSUB
1000 F=1
90 NEXT
100 IF F=1 THEN 60
110 PRINT
120 FOR T=1 TO 20
130 PRINT A$(T)
140 NEXT
150 END
1000 SS=A$(T)
1010 AS(T)=A$(T-1)
1020 AS(T-1)=SS
1030 RETURN
```

**A** The problem with sorting strings is that the computer compares the Ascii values of the strings. This means that any numbers at the beginning will be sorted for the Ascii values as well. This puts 0 to 9 in the correct order but 10, 11, 12, etc. will be included with the 1s and before the 2s, 21, 22, 23, etc. will come with the 2s and before the 3s. This is because the Ascii value for 0 is 48, 1 is 49 etc. The letters start at 65 etc.

If you have numbers before all the strings in the list then the solution is to include the VAL function as the comparison then converts the string as far as it can into a number which will then be put in the correct order.

In your example program, change line 60 to

```
80 IF VAL(A$(T)) < VAL(A$(T-1)) THEN
GOSUB 1000 F=1
```

If you have a mixture of characters and numbers at the beginning of each string then

things become a little more complicated. The most obvious thing to do is sort the array in two halves, the numbers and then the letters.

The only problem is that alphabetically the numbers come before the letters (see any book index) whereas in a sort, they come after ie ABC123.

This is because, using VAL on a non-numeric character gives 0. The way around this is to display the sort in two halves as well.

The program below may not be the most elegant method but it does the business.

```
10 DIM A$(20)
20 FOR T=1 TO 20 STEP 2
30 A$(T)=STR$(T)
40 NEXT
50 FOR T=2 TO 20 STEP 2
60 A$(T)=CHR$(55-T)
70 NEXT
80 GOSUB 330
90 F=0
100 FOR T=2 TO 20
110 IF VAL(A$(T)) < VAL(A$(T-1)) THEN
GOSUB 290 F=1
120 NEXT
130 IF F=1 THEN 90
140 GOSUB 330
150 S=1
160 IF ASC(A$(S)) > 50 THEN
S=S+1: GOTO 160
170 F=0
180 FOR T=2 TO S-1
190 IF A$(T) < A$(T-1) THEN
GOSUB 290 F=1
200 NEXT
210 IF F=1 THEN 180
220 FOR T=5 TO 20
230 PRINT A$(T);
240 NEXT
250 FOR T=1 TO S-1
260 PRINT A$(T);
270 NEXT
180 END
290 SS=A$(T)
300 AS(T)=A$(T-1)
310 AS(T-1)=SS
320 RETURN
330 FOR T=1 TO 20
340 PRINT A$(T);
350 NEXT
360 PRINT
370 RETURN
```

Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem Peek it to Kenn Garroch and every week he will Poke back as many answers as he can. The address is Peek & Poke, PCW, 12-13 Little Newport Street, London WC2H 7PP.

# All-singing, all-dancing Compunet demos

Graham Edkins brings you up-to-date on all the new Compunet demos, programs and services, including how to get on to its programmers' directory, and the best from the Hall of Fame, where your demos could gain an indefinite life.

Compunet has opened a new area on their network especially designed to bring software houses and programmers together. The area is called Show Biz and represents the formalisation and organisation of the 'Online Jobshop' which Compunet has become.

## Software houses

Major software houses are now maintaining directories on Compunet, over which they have complete control to advertise their needs. These software houses also have access to the Closed User Group (CUG) which contains a directory of programmers in categories of coders, graph-

ics, music, teams, game in progress, trainees and non-CBM programmers.

If you would like to see the Show Biz area then GOTO BIZ. On the other hand if you are more interested in looking at and downloading the demos themselves, then the first place to look is 'Demos'.

Ubik who produces many good demos, has one called *Psychedelic* on Page 223252. This is unusual because it's a preview of a forthcoming demo. It has a great piece of music and a dynamic display of colour blocks which owes more than a little to Jeff Minter's *Psychodelia*. The final version of this demo will have the display under user control.

The NWCUG has two demos which have been uploaded by ISS. The first at 228430 is my favourite. It has several coloured blocks

a 'fine addition to a collection of computer art'.

The Maanteam also have a sub-directory to themselves inside 'Demos'. The two programs, *Big Jobs* and *Gargantuan*, both consist of music and a scrolling message with letters so large that they fill the screen, demonstrating the technique of addressing the border. This, incidentally, was considered to be impossible by most programmers until Compunet users proved differently.

## Moving sprites

Go to 212238 for Spidey's *Epilepsy* program and you will be rewarded with music, bouncing sprites, flashing screens, a picture of a spider and the longest list of 'hello's' that I've seen yet. All of this is under keyboard control.

*Marzipan* by Goblin and Ian is typical of so many of the demos that one downloads. The border area is put to good use and contains colourful moving sprites showing the name *Marzipan*. It also has music borrowed from Rob Hubbard and a scrolling message. Other current demos following roughly the same pattern include *Sanxacia* Demo on page 229614, *MFG1's Side-FX* at 237422 and *The Highlanders 1* and *2* in their directory at 216001. It is well worth seeing one of these because they are all well written, but you are unlikely to want all three taking up your disc space.

*Mega Mover* is something a bit different. This demo, written by Trenz is uploaded on page 237565. It shows first a small and then a large spaceship viewed from above passing slowly from top to bottom of your screen. This may sound a little tedious, but the detail in the graphics makes it a pleasure to watch even if it is over too quickly.

Hero's Den has another couple of worthy downloads, *Pacer* being an animated runner facing away from the screen on a vertically scrolling tiled floor, and *Ceefax Re-mix*, which is a jokey simulation of the real thing. Both of these demos are at 230122. If a demo is really outstanding then

I am the Law:  
no prizes for  
guessing who this  
is. Compunet  
demo by STE66

scrolling round one behind the other to form a spiral. Pressing the space bar will cause the tune to change and a scrolling message on a grid scrolling at a different speed to appear along with graphics forming and fading in the top third of the screen. The second demo has coloured hearts dancing on the screen and is on page 235638.

Torquemada, who takes a text frame in his directory at 777793 to explain that he isn't Jason who is his brother and his first name is not Steve, has a large selection of mainly mono-hires graphics. These are well put together and any, if not all, would make

Programmers on Compunet can have an entry into this directory without charge and it can be updated regularly, and holds information such as experience, where to find a sample of work on Compunet, availability to work, home address and telephone number if wanted. Even programmers who don't have subscriptions can have an entry in the directory provided that they know someone on the system who is prepared to send the information via the Email system to the Editor.

ics, music, teams, game in progress, trainees and non-CBM programmers.

# COMMUNICATIONS

Compunet uploads it into the Demo Greats area of the Hall of Fame, giving it an indefinite life.

You can reach this area by selecting 'DEMOH'. I would suggest that it's worth buying a fresh box of discs (and even a disc drive if you don't have one) and downloading every single program in its directories. I have selected a few which are particular favourites of mine but don't be fooled into thinking that only those mentioned are worthy of your time.

MACH81 under the title of Kenetic Design, has uploaded three stunning pieces in his directory at 201569. Power Windows is a spool. Amiga Tutankhamun graphic. Pure

**Chrome Robot:**  
demo with music  
on Compunet by  
EAD7

**"These are well put together, and any, if not all, would make a fine addition to a collection of computer art"**

Genius has blocks re-arranging themselves until they form a picture of a well-loved beer and Ace Activation demos many of that company's software products in a style that I could watch many times over.

Rainbow Maker by Rob and Mark is a graphic of Jeff Minter accompanied by sheep images and all surrounded by a rainbow scrolling border. This is on page 204696. While page 206653 has Sir's Transputer Demo showing a large animated Newton's cradle. The Thrust Concert has the music of the game and the graphics show a complete group of musicians playing it. This very entertaining demo is from Sloat & Tim at 217681.

ARC86 has programmed a demo extolling the virtues of Compunet. It is called the 10 Minute Trap, probably because it runs for about that time. It is on page 216784. AEW's Sport Aid has a Run the World tune and a good graphic in an animated runner.

This program was at one time sold to raise money for Sport Aid, both on Compunet and Prestel, with neither taking any commission from the proceeds. Rather than letting it disappear after all of its sales have been made, Compunet have now made it available in no charge on page 218860.

Anagram have uploaded Hais Creation, at 226025, which is a music demo accompanied by sprites moving in a way reminiscent of the bathing beauties seen doing formation swimming in old black and white musicals. Mack & Zaz have created a program which they call Cnet Link. It's a little too complex to try to explain here, but I recommend that you download it for your self from page 235453.

# Cheetah converts Mini to CPCs

Mark Jenkins looks at the latest version of Cheetah's Mini Interface for Amstrad CPCs, and answers some readers' queries.

A few months back we reviewed the Cheetah Mini Interface for the Spectrum, and now the company has converted the system to the Amstrad CPC range.

The system includes a Cheetah MK5 Midi keyboard, which we've mentioned many times; it's a five-octave full-sized Midi control keyboard with no sounds of its own which has a pitch bend wheel, stripped-down patch and octave select controls and a bargain price of £55.

To the MK5 you have to add the Mini Interface which plugs into the computer, and the software on tape or disc. The routine here are as similar to those on the Spectrum as possible and in fact the Spectrum and Amstrad have the same sound chips so the end results will be pretty similar too.

The micro holds 64 sounds in memory and these range from thin, pingy games-type sound effects to quite powerful chordal sounds; the ADSR envelope is fully programmable so you can alter the way the note fades in and out and how the pitch varies during the course of the note; you can play three notes at a time from the MK5 keyboard.

The system is menu-driven, but it doesn't take too long to go from one page to another; you can split the keyboard and edit sounds, saving a new sound or a whole set of sounds to disc.

I can't comment in massive detail on how the Amstrad version of the Cheetah system performed, because mine kept crashing every 30 seconds or so. Maybe I have a bit of a wobbly edge connector on my CPC. However, what I could listen to (in 30 second chunks) was quite promising: if you have a CPC the Cheetah system will take you some way into creating new sounds and recording them on tape, and when you exhaust the potential there, you'll have a very serviceable master keyboard which will allow you to control any Midi synth modules you may go in for.

Now on to a few readers' letters. Herr Frankenfied has written the way from West Germany with a question on the Spectrum 128. He has a Yamaha DX7 synth and would like to store sounds from it and edit them on the Spectrum; this is a very popular application for micros because the DX7's sounds are defined by 147 different

parameters and there's only Data Entry slider to alter them all.

Herr Frankenfied wants an interface and editing software for the Spectrum and the only current solution lies with the XRI system, comprising their Micon interface (£49.95) with software (£24.95). However, the company is doing a special offer at the moment which throws in its *Step Time* sequence editor as well (normally £38.95) for a total price of £75.

Michael Neville of Edinburgh saw our

Screen from Cheetah's Amstrad Mini Interface

review of *Super Conductor* and wonders if it would operate in conjunction with a Midi keyboard with 13 channels as opposed to 16. I'm sure it would, but I can't think of any keyboard that won't work on channels 14-16, or any keyboard that's 13-note polyphonic, or any keyboard that has thirteen memories. What's meant by a Midi 'Channel' is a setting which allows the synth to respond to one set of information and ignore 15 other sets; most synths only respond to one channel at a time but some can respond to four (like the Casio CZ synths), some to six (like the SCI Max and Six-Trax) and some to eight or more (like the Prophet 2000).

Whether you use one, two, 13 or all 16 Midi channels with your software depends entirely on whether you have enough synths to take advantage of them. Now perhaps, Michael, you'll write back and tell us exactly what it is that you've got 13 of.

A J Martindale of Milton Keynes has a Yamaha CX5 music computer, an FB-01 module for additional sounds, a Gostex X-15 poststudio and a Yamaha YMC10 converter to synchronise the computer with tape. He's selling the CX5 and buying an Atari

520ST soon and would like to use the Midi potential of this machine, but would still like to use the YMC10 converter to link everything in tape.

*Step Time* input is also important, and on the whole the EZ-Track package we mentioned from Hybird Arts is not best suited for this sort of application. *MicroDeal's Super Conductor* is the best bet here, and costs only £50 or so. The YMC10 should sync *Super Conductor* to tape quite happily and the package itself will play the FB-01. If you do get the ST you can choose an editing package from *Soundbits* (Synchromic Music) or *Dr T* (Take Note) to create new FB-01 sounds as well.

Paul Duggan of Caeffilly is a semi-pro musician who wants to be able to type music directly into a micro from a music or Qwerty keyboard. He then wants to be able to save and edit the piece and present it in printed form with lyrics to a group of up to eight musicians.

Paul has a CPC464 at the moment and has tried Firebird's *The Music System*, finding it pretty limited for his applications. He says: "I have tried to find out about other systems available but the computer shops don't understand music and the music shops don't understand computers." This, of course, is the secret of the universe, as Paul has obviously discovered.

Paul's thinking about the Atari ST and this seems to be his best bet at the moment. Dr T manufactures a *Score Writer* package (distributed by Take Note) which will cope with very complex note entry and gives massive editing and lyric insertion options; it costs a couple of hundred pounds but the only real alternative is to get Steinberg's Pro-16 and TNS *Note Editor* on the Commodore 64, together with a decent dot matrix printer, and that seems something of a sideways step for an existing Amstrad owner.

Take Note, Unit 7, 43 Canal Street, Camden Town, London NW1 0HT, 01-485 2998.

Cheetah Marketing, Norbury House, Norbury Road, Farnwater, Cardiff CF5 3AS, 0222 555525.

XRI Systems, 10 Sunnybank Road, Wyde Green, Sutton Coldfield, West Midlands B73 5RE, 021 382 6048.

**PCW6.** Do you own a home micro? Do you want something more than the usual boring games? This is most certainly for you. Don't just play at life, become part of it by starting your own HOME BASE BUSINESS. The benefits are many and varied. Full or part-time for FREE details S.A.E. to Mr G. McGovern, (PCW6) 111 Pilcon Place, King and Queen Street, Waltham, London SE17 1DR.

# NEW RELEASES

## Your complete guide to all the software released this week

### Amstrad CPC

**Program** *The Fifth Quadrant* **Type** Arcade **Price** £8.55 (tape), £12.95 (disc) **Supplier** Bubble Bus Software, 87 High Street, Tonbridge TN9 1RX.

Intergalactic survey crew in overrun by alien Zimen - you control any of four robot characters trying to regain control of the ship by reprogramming the computers.

Your heroes: Slog, Plot, Knut and Bodd (we'll all have names like that in the future, you know) each have different characteristics which have to be exploited to translate the alien language and control the ship's systems.

Pleasant 3-D perspective over 230 locations.

**Program** *Tournament Leaderboard* **Type** Golf simulation **Price** £4.99 (tape), £9.99 (disc) **Supplier** US Gold Units 2 and 3, Halford Way, Halford, Birmingham B6 7AX.

Four more 18-hole courses to rejuvenate Amstrad Leaderboard addicts.

**Program** *Vetrocross* **Type** Arcade **Price** £9.99 (tape), £14.99 (disc) **Supplier** US Gold Units 2 and 3, Halford Way, Halford, Birmingham B6 7AX.

**Program** *Thing Bounces Back* **Type** Arcade **Price** £9.99 (tape), £14.99 (disc) **Supplier** Gromlin Graphics Units 2 and 3, Halford Way, Halford, Birmingham B6 7AX.

See panel for comment.

**Program** *Silly Crazy* **Type** Arcade **Price** £2.99 **Supplier** Masterforce, 8-10 Paul Street, London EC2A 4JH.

**Program** *Enterprise Type* **Price** £8.95 **Supplier** Melbourne House, 8-10 Paul Street, London EC2A 4JH.

**Program** *World Games Type* **Simulation** **Price** £9.95 (tape), £14.99 (disc) **Supplier** US Gold Units 2 and 3, Halford Way, Halford, Birmingham B6 7AX.

**Program** *Shadows of Mordor Type* **Price** £8.95 (tape) **Supplier** Melbourne House, 8-10 Paul Street, London EC2A 4JH.

More hobbyism from Melbourne House's Lord of the Rings licence.

**Program** *Mystery of Arkham Manor* **Type** Adventure **Price** £7.95 **Supplier** Melbourne House, 8-10 Paul Street, London EC2A 4JH.

**Program** *Barbarian Type* **Price** £9.99 **Supplier** Fairace Software, 275 Pentonville Road, London N1 9NL.

### Amstrad PCW

**Program** *Leaderboard Type* **Golf simulation** **Price** £9.99 **Supplier** US Gold Units 2 and 3, Halford Way, Halford, Birmingham B6 7AX.

Never have the greens looked so green.

**Program** *The Desktop Publisher Type* **Price** £29.95 with 48K mouse and interface - introductory price until June 30 **Supplier** Database Software, Europa House, 68 Chester Road, Hazel Grove, Stockport SK7 5NY.

Third desktop publishing package for the PCW in as many months following the well-publicised *Fiel Street Editor* and *Worddesk* international by Electric Studio.

Database's offering follows the strategy of its *Word Office* products - the basic facilities at a lower price.

We'll look at *The Desktop Publisher* in more detail in a later issue. Meanwhile note that the £29.95 for program plus mouse quoted above is an introductory price and goes up to £79.95 in July.

### BBC

**Program** *Temple of Terror Type* **Adventure** **Price** £7.99 (tape), £12.99 (disc) **Supplier** US Gold Units 2 and 3, Halford Way, Halford, Birmingham B6 7AX.

The latest Nexus Production effort is a scrolling shooter which borrows all the latest gimmicks in this style of game.

The idea is that the Earth has run out of energy and sends a fleet off to look for some. However, lying in wait are the bad guys, and you happen to get there ahead of the main fleet. So, you have to go over all the surfaces in this region of space, blowing things up.

With motivation like that I know you'll soon be reaching for a joystick. In play, the game comes over as a cross between *Terra Cresta*, *Lightforce* and bits of *Nemesis*. The scrolling of the backgrounds is not overly impressive, with sporadic jerks occurring, and neither are the sprites. They persistently flicker and the detection around the front end of your ship is a trifle suspect. It's graphically quite appealing, however.

Shooting certain of the ground based constructions results in extra bits of equipment floating towards you. These include extra speed (initially it's slow) and weapons. Without them, you'll probably start wondering when the game's going to start.

There's no doubt that as a shoot 'em up, *Hades Nebula* has all the right ingredients, and the bird's eye perspective, à la *Lightforce*, adds extra interest.

All this would be acceptable for a budget game, but *Hades Nebula* is a full price release.

And as budget titles get better, so the full-priced games have to stay several leaps ahead. And *Hades Nebula* is not 'several leaps' ahead.

Duncan Evans

# The power of NASA at your fingertips

The last couple of months have been a revelation for IBM PC compatible games. I have had to radically alter my opinion of the machines as businesslike but boring.

After the phenomenal *Star Flight* comes *Space M+A+X* (affectionately known as *Max* hereafter), from the previously unknown Final Frontier Software.

*Max* is billed as a space station construction simulator and the emphasis really is on the simulation.

## Big business

It was written by TL Keller, a former programmer at the Jet Propulsion Lab in Pasadena where he wrote management systems for the Mariner, Viking and Voyager missions: so he is a man who knows big business.

When NASA eventually gets off its collective bum and starts a space station project, you get the impression they could use this program as it stands.

Although there are some ex-

cellent graphic displays, *Max* is predominantly text-based and menu-driven.

You have to build the station within a given time limit (around 90 days). Using shuttles and unmanned rocket vehicles, you must transport the necessary building blocks and crew into orbit, not forgetting enough food, water, air and medical supplies to keep everyone up there healthy.

These are unlicensed employees and if conditions are poor, or unsafe, you'll have a strike on your hands.

Assembling the station itself is the key to the program.

Every module needs a certain number of days to assemble and activate, and you can't leave people up there until you have heat, electricity, a command module, living quarters and sundry other bits and pieces.

Since the idea is to create a working station, and not an

orbiting bed and breakfast hostel, you'll also have to add experimental labs and materials processing unit (*Max* stands for Materials processing, Astrophysics and experimental facilities).

## New drugs

You don't get to fly the shuttle, but you do have to keep an eye on weather for launches and landings and decide whether to hold on the pad or in orbit (of course, time is money).

Provided that you meet the time limit, and get your station working, you can then clock up the earnings by producing new drugs, advanced metal alloys and other wondrous things for which earthbound industries will pay through the nose.

The package comprises three discs and an incredible manual printed in full colour with official NASA photographs and more detail about space

stations than you could want to know - but you need to know.

*Max* isn't so much a game as a truly realistic management simulation. However, if it is entertaining and amusing, and not all "games" can claim that.

It will take you many hours to get a station up and running without forgetting those small but all-important details, and endless attempts after that to make a killing in manufacturing.

## Lavish manual

At £35 it's almost a bargain, especially given the lavish manual and size of the program. And it will be a long time before you get any closer to this particular reality.

Peter Worlock

**Program Space M+A+X Micro IBM PC and compatibles**  
**Price** £34.95 protected  
**£41.95 unprotected** Supplier: Final Frontier Software, 136 Regent Street, London W1R 5SA.

## Commodore 64/128

**Program Dark Empire Type Strategy** Price £9.95 Supplier Lothman, Victory House, 14 Leicester Place, London WC2H 7NB

**Program Melnicross Type Arcade** Price £9.95 (tape), £14.99 (disc) Supplier US Gold, Units 2 and 3, Holford Way, Holford, Birmingham B6 7AX

**Program Stripp & Co Type Arcade** Price £9.95 (tape), £12.99 (disc) Supplier Future Soft, 275 Pentonville Road, London N1 9NL

Stylised cartoon-driven adventure set in the era of Bonnie, the sun never setting on the Empire and Johnny Dapo getting a well-deserved thrashing at the hands of his blue Viscount Stripp.

Superb graphics and screen handling, complex gameplay, and excellent Richard Wigg music.

**Program Contacts 2 Type Strategy** compilation Price £9.95 (tape), £14.95 (disc) Supplier PSS, 452 Stoney Stanton Road, Coventry CV6 5DG

Subtitled *Great Battles of the Pacific*, this is the second in a series of compilations by wargaming specialist PSS.

This one comprises *Battle for Midway* and *Two Jims*, plus, exclusively for Commodore buyers, the new *Okunawa*.

**Program Max Torque Type Racing**

simulation Price £8.95 (tape), £12.95 (disc) Supplier Bubble Bus Software, 87 High Street, Tonbridge Kent TN11 1RK

Motorbike racing simulation claiming authentic recreation of bike steering, gears, throttle and brake characteristics for seven different (rival) machines.

Possibly too similar to *Enduro Racer* to make much impact.

**Program Shadows of Mordor Type Adventure** Price £8.95 (tape), £14.95 (disc) Supplier Melnicross House, 8-10 Paul Street, London EC2A 4JH

**Program Go! the Destroyer Type Arcade** Price £6.95 (tape), £14.95 (disc) Supplier Melnicross House, 8-10 Paul Street, London EC2A 4JH

**Program Barbarian Type Arcade** Price £9.99 Supplier Palace Software, 275 Pentonville Road, London N1 9NL

See panel for comment

**Program Thing Bounces Back Type Arcade** Price £9.99 (tape), £14.99 (disc) Supplier Gremlin Graphics, Units 2 and 3, Holford Way, Holford, Birmingham B6 7AX

See panel for comment

**Program Faces Nebula Type Arcade** Price £6.95 (tape), £12.95 (disc) Supplier Nexus Productions, OSB House, 30 High Street, Beckenham Kent BR2 0XW

See panel for comment

**Barbarian** is rapidly becoming more famous for its advertising than the actual program, thanks to the prominence given to pin-up floozy Maria Whittaker. Depending on your taste, you may or may not be glad to learn that the woman is all over the inlay and on a large poster inside, where she poses with a barbarian with a big weapon.

The game itself (yes, there actually is one) casts you as the iron-thewed unwashed one, out to rescue aforementioned floozy, who is a princess of somewhere.

Set against a variety of backgrounds you and your sword must defeat a plethora of similarly armed foes. The range of possible actions are as follows: jump, protect body, move forward, roll forward, crouch, roll back, move back and protect head.

Using the fire button on the joystick gives you another eight possibilities. Neck chop, head butt, body chop, kick, leg chop, overhead chop, and web of death (I).

To win a contest you must either inflict a set number of blows on your opponent or behold him with one blow. Should you try for the lucky blow and succeed you are rewarded with the sight of a spurt of blood and a head bouncing onto the floor. A small green thing then appears and drags the body off screen while kicking the detached head along. Yeah, it's a tasteful package all round.

The Amstrad version is easily the best, with animation rather shaky on the Commodore. On all, however, the sprites are large and fighting is entertaining enough to keep you taking on the louts one more time. If you're looking for *Way of the Exploding Fist* with sex and violence then you'll probably find *Barbarian* an ideal buy.

Duncan Evans

**Program The Fifth Quadrant Type Arcade** Price £8.95 (tape), £12.95 (disc) Supplier Bubble Bus Software, 87 High Street, Tonbridge Kent TN11 1RK

**Program Killed Until Dead Type Adventure** Price £9.99 (tape), £14.99 (disc) Supplier US Gold, Units 2 and 3, Holford Way, Holford, Birmingham B6 7AX

## IBM PC and Compatibles

**Program Ability Plus Type Integrated business pack** Price £182.95 Supplier Megal Software, 37 Dover Street, London W1X 3PB

## MSX

**Program Cosmic Shock Absorber Type Arcade** Price £8.99 Supplier Maltch, Maltch House, Bay Tor, Pevensy Bay, East Sussex, BN2 6EE

your own **Mini Office**  
program **FREE**.

## MINI OFFICE

### ORDER FORM

Please enter my annual subscription to *Popular Computing Weekly* at **£25.00 U.K. £39.95 Overseas** and send me my **FREE MINI OFFICE** program as indicated below.

Send me **MINI OFFICE** for: ☐ Amstrad ☐ Commodore ☐ Spectrum  
☐ Electron ☐ BBC

☐ Please debit my Access/Visa/AmEx card no: ☐ I enclose ■ cheque made payable to  
[ ] Sunshine Publications Ltd.

Expiry date: ..... Signature: .....

Name: .....

Address: .....

Return this form to: PCW Subs, 12-13 Little Newport Street, London WC2H 7PP, U.K.

# FREE SOFTWARE ...

**Is what you get when you buy an Amstrad PCW, but how many people make the most of it? Now, for the first time, this double package from two of Britain's most experienced computer authors takes the ill off the PCW's hidden power:**

- **WORD PROCESSING:** everything you always wanted to know about templates, layouts, standardised forms, odd-sized formats — from the ABC of LocoScript to the sophisticated techniques of the modern office
- **CP/M:** sensible working methods for a secure and efficient system
- **GSX:** complete details ■ how to get presentation-quality graphics from straightforward Basic programs
- **LOGO:** graphics and list processing for the first time user
- **BASIC:** your own suite of business programs including a database, accounts program, bank account record, invoice creator and many more.

Practical Amstrad Word Processing and The Amstrad Companion — 440 pages of ideas that will turn your PCW into the power house it was meant to be! **You can obtain the books at only £6.00 each or an amazing price of £10.00 for the two including p&p.**

**To Theresa Lacy, Sunshine Books  
12/13 Little Newport Street  
London WC2H 7PP**

Please send me \_\_\_\_\_ copies  
of practical Amstrad Word  
Processing and Amstrad Companion  
(both for £10 inc. p&p)

I enclose ■ cheque/postal order for £\_\_\_\_\_ payable to  
Sunshine Books  
Alternatively please debit my Visa ☐ Access ☐  
American Express ☐  
Account Number \_\_\_\_\_ Expiry Date \_\_\_\_\_  
Signed \_\_\_\_\_

## MSX

**Program** *Thing Bounces Back*  
**Type** Arcade **Price** £9.99 (tape).  
£14.99 (disc) **Supplier** Gremlin  
Graphics, Units 2 and 3, Holford  
Way, Holford, Birmingham B6 7AX.

See panel for comment.

**Program** *Master Chess Type Smu*  
**ilation** **Price** £1.99 **Supplier** Master  
tronic, 8-10 Paul Street, London  
EC2A 4JH.

**Program** *Uchi Mata Type* Judo  
simulation **Price** £9.95 **Supplier**  
Maritech, Maritech House, Bay Ter-  
race, Pevensey Bay, East Sussex.  
BN2 6EE.

Conversion of underrated judo  
simulation. *Uchi Mata* first appeared  
just at the wrong end of the martial  
arts game boom, and most people

never quite got the idea that it  
wasn't a repackaged Brian Jacks,  
nor Maritech's answer to *Fist*.

In fact, it's rather more complex -  
certainly less easy to get into than a  
karate basher, but probably more  
long lasting when you do.

## Spectrum

**Program** *Doc the Destroyer Type*  
**Combat** **Price** £7.95 **Supplier** Mel-  
bourne House, 8-10 Paul Street,  
London EC2A 4JH.

**Program** *Barbarian Type* Arcade/  
Combat **Price** £9.99 **Supplier** Pal-  
ace Software, 275 Pantherville Road,  
London W11 9NL.

**Program** *Conflicts 2 Type* Strategy  
compilation **Price** £7.95 **Supplier**  
PSS, 452 Stony Stanton Road,  
Coventry CV6 5DG.

Spectrum version of PSS's latest  
compilation comprises *Battle for*  
*Midway* and *Two Jims*.

Almost old enough to be called a classic, *Thing On A*  
*Spring* was one of Gremlin Graphics' earlier releases,  
and set many new standards for complexity and program-  
ming polish. The belated sequel, *Thing Bounces Back*, is  
just as good technically, with excellent music, effects and  
sprite control, but doesn't make quite the same impact.  
Things have moved on, if you'll pardon the pun.

The Commodore 64 version - far better than the Am-  
strad, Spectrum or MSX games - is the product of no fewer  
than seven programmers. Like most committee jobs, the  
game suffers from having everything thrown in fairly  
haphazardly, with some attempt to organise it into a game  
afterwards.

The opening screen sees Thing, on its mission to disable  
the computer of the evil goblin, zooming around a network  
of pipes in the old toy factory.

Controlling Thing's movement, reversing direction with  
the fire button, allows you to wind up at one of the exits  
leading to the eleven eight-way scrolling sub-games.

Each of these has a 12-screen area, and features a  
network of slides, platforms, escalators, bounce pads,  
blowers, doors, pipe entrances and mystery squares,  
some of which turn out to be booby-traps. Thing has to  
collect Roms, discs, cassettes and listing paper from each  
screen; opposing it are various meemies which attempt to  
drain his oil, squash him or otherwise bring him down.

£7.99 for the Spectrum and MSX versions is OK-ish,  
£9.99 for Amstrad and Commodore cassette is I think,  
pushing it a bit, and you will definitely not get £14.99 worth  
of pleasure from the Amstrad and Commodore discs. Still,  
sure to be a reasonable hit.

Chris Jenkins

**Program** *Dark Empire Type* Strategy  
**Price** £9.95 **Supplier** Lothlorien,  
Victory House, 14 Leicester Place,  
London WC2H 7NB.

**Program** *Tournament Leaderboard*  
**Type** Golf Simulation **Price** £4.99  
**Supplier** US Gold, Units 2 and 3,  
Holford Way, Holford, Birmingham  
B6 7AX.

**Program** *Thing Bounces Back*  
**Type** Arcade **Price** £7.99 **Supplier**  
Gremlin Graphics, Units 2 and 3,  
Holford Way, Holford, Birmingham  
B6 7AX.

See panel for comment.

**Program** *Metrocross Type* Arcade  
**Price** £8.99 **Supplier** US Gold,  
Units 2 and 3, Holford Way, Holford,  
Birmingham B6 7AX.

**Program** *Ballcrayz Type* Arcade  
**Price** £2.99 **Supplier** Mastertronic,  
8-10 Paul Street, London EC2A  
4JH.

# Games with a conscience

I use my computer for producing original education material for my work, or for word processing. The occasional outing on *Flight Path 737*, ancient though it now is, is as much a challenge after a dull day at school as it can manage.

But for my children it's a different matter. Occasionally they condescend to use the educational programs I bought to convince my sceptical wife that computers are 'good for the kids'. But it's not long before they've given up and returned to the favourites - *Dan Dare* or *Chuckie Egg* - we can't afford more up-to-date games - and they get a great deal of fun from them, which I don't begrudge at all.

Sometimes, however, reading the adverts for new games, I get that sinking feeling in my gut. What's behind them all? Yes, they develop reflexes, ingenuity and stimulate imagination. But what about content? The mildest level is about dodging

assorted nightmarish fates. Then there are exercises which exalt acquisitiveness and competitiveness, and then there are the outright exercises in aggression and warfare, either fantasy or reality simulated.

Recently there have been several games of geopolitical strategy, including those which give the player the role of dictator or superpower demi-god. Again, these games nurture fantasies of power without including any serious ethical content. Admittedly, there have been a few ecology games, but would a whole new category of simulation, strategy and adventure games, appealing to more responsible humanitarian instincts, prove entirely boring and unpopular?

How about something based around running a refugee camp in an unstable famine-ridden country? Object: not personal survival but keeping a community alive and giving it back its dignity. Or an adventure game that was based around rural

development in India, or the creation of village industries from scratch against the opposition of local vested interests? These things require skill, imagination and endless persistence in the face of daunting difficulty - attributes much loved by computer fans.

There's as much information available to programmers on these subjects as there is about the handling characteristics of the F15 or a wartime submarine. They might just inspire games fans to channel energy into creative outlets in the real world instead of creating an inner world full of fantasies of acquisition and destruction.

The capacity for these things is part of us all, whether we admit it or not. But to dwell almost exclusively on these themes for fun - isn't this the electronic equivalent of bread and circuses, or the opiate of the people? If only my programming abilities matched my ideas.

Keith Kimber

## PUZZLE

### Puzzle No 260

The aliquot divisors of a number are all those whole numbers which divide into it exactly, including one but excluding the number itself. The aliquot divisors of six are three, two and one. In the case of six, if we add together the aliquot divisors we get the number itself. In this case six is called a 'perfect' number.

Some numbers, when treated in the same way, exist in pairs. For example, the aliquot divisors of 220 sum to 284, and the aliquot divisors of 284 sum to 220. Pairs such as this are known as 'amicable' pairs.

Other numbers form amicable chains of several intermediate numbers before returning to the starting point. One such is the five stage chain of 12496, 14286, 15472, 14536 and 14264. The aliquot divisors of this last number will sum to 12496, thus forming a chain of five repeating numbers.

Can you determine how many numbers are in the chain which has 83328 as one of its numbers?

### Solution to Puzzle No 255

The two additions were: 482 + 157 = 639 and 614 + 358 = 972

Because of the error in the display the display was as follows:

Actual digit      1 2 3 4 5 6 7 8 9  
Displayed as      4 3 8 1 5 7 6 2 9

The program uses a series of loops to generate each of the digits in turn. Each of the possible digits is tested in the nine variables R, S, T, U, V, W, X, Y and Z. From the two examples given, we can disregard the actual digits, and just take account of their relative positions. So we can replace the digits by letters as: RST + UVW = XYZ and XUR + YVS = ZWT.

The program uses these variables, generating other values where possible. The first of the additions is used as a basis of generating the variables, the second being used as a cross-check. For example, value Z can be calculated directly once we have T and W.

### Winner of Puzzle 255

This week's winner is Andrew F Scott of Peterborough, who will receive £10.

```

200 FOR W=1 TO 9
210 FOR T=1 TO 9
220 IF W=7 THEN GOTO 240
230 FOR U=1 TO 9
240 IF T=U OR T=W OR U=W THEN GOTO 230
250 FOR V=1 TO 9
260 IF V=U OR V=W OR V=T THEN GOTO 250
270 IF (R+S+T+U+V+W) MOD 10 = X THEN GOTO 280
280 IF (R+S+T+U+V+W) MOD 10 = Y THEN GOTO 290
290 IF (R+S+T+U+V+W) MOD 10 = Z THEN GOTO 300
300 IF (R+S+T+U+V+W) MOD 10 = 0 THEN GOTO 310

# VIP PROFESSIONAL

## THE POWER OF LOTUS 1-2-3™ ON THE ATARI ST

### 'LOTUS PLUS GEM'

Probably the most impressive program to have been released so far for the Atari ST range, VIP Professional is an extremely easy to use, integrated spreadsheet, database and graphics program which is identical both in features and commands to Lotus 1-2-3™. To give you the best program possible on your Atari ST, VIP Professional integrates the three essential applications of Lotus 1-2-3™ with the smart face of GEM. The same spreadsheet analysis, information management and extraordinary business graphics are all combined in one easy to learn, affordable package. What's more, VIP Professional not only has all the features of 1-2-3™, you can also type the same commands to do the same things. Or, better still, you can use a mouse to make it even simpler! VIP requires only one disk drive to operate and also works with a hard disk drive. It is compatible with both monochrome and colour systems. Probably the most surprising feature of VIP Professional is not its total compatibility with Lotus 1-2-3™, nor its ease of use with the GEM environment, but its price. Lotus 1-2-3™ for the IBM PC AT costs £395 (+VAT-£454.25), whereas VIP Professional for the Atari ST range of computers is a mere £199 (+VAT-£228.85). That's nearly HALF PRICE!

(+VAT-£228.85)

### 1 SPREADSHEET

VIP Professional was modelled after the powerful, best selling Lotus 1-2-3™ program. It has every feature, every command of that program. In fact, the experienced 1-2-3™ user will feel right at home using the same keystrokes. But this version is made even easier to use by adding the user friendly face of GEM, so the beginner can use it right away. If you want to do your home budgets, financial planning, or sophisticated business inventory control or budget modelling, VIP Professional will fit the bill. And you can freely use 1-2-3™ or VIP Professional files created on other computers in VIP Professional on your Atari ST. And Professional is not only flexible, it's powerful too, with a full 8,192 row by 256 column worksheet to use with up to a massive 4Mb of memory. (Note: Lotus 1-2-3™ has only 2,048 rows).

### 2 DATABASE

VIP Professional includes a powerful data manager to arrange, store and analyse your important information. It can all be used to store your home or business records and do extensive searches, sorts and comparisons. It allows up to 8192 records, with up to 256 fields and queries and search criteria. The database manager can all be used in conjunction with the spreadsheet commands to add greater power to the database facilities including sorting specific ranges of the database. You can also specify how you sort files, from the highest value to the lowest value (or from the lowest to the highest), or alphabetically (forwards or backwards). The graphics part of VIP Professional can be used to show trends in the database or other information. With its powerful statistical functions, it has almost limitless power.

### 3 GRAPHICS

VIP gives shape to your figures by letting you graph your data into six different types of graphs, in startling colour or black and white. Pie charts, bar graphs, stacked bar graphs, line graphs, scatter graphs and X/Y graphs. You can graph your spreadsheet or database data to give instant professional presentations. Your graphs will change instantly as you change the data. When creating a graph you may specify a main heading, a sub heading and a third title at the base of the graph. The necessary scales can be defined either by the user or automatically created. In pie graphs, the most important section of the pie can be separated from the other sections to draw attention to its importance. You may save graphs individually on disk for use at a later date. You can also print your graph on any Epson compatible dot matrix printer.

- Professional has 'Instant Help' so you can find more information instantly.
- calculates to a full 300 digits against Lotus 1-2-3™ which only calculates to 100.
- VIP allows for 256 Query Fields against only 20 allowed by Lotus 1-2-3™.
- VIP has a complete GEM interface, for ease of use, unlike the rest of Lotus 1-2-3™.
- VIP allows different fonts and has an on/off cell grid. Not found in Lotus 1-2-3™.
- VIP supports greater memory and bigger spreadsheets than Lotus 1-2-3™.
- VIP graphs and worksheet can be viewed together. Pie charts can be exploded.
- VIP can accept any WK1 files from Lotus 1-2-3™ without modification.
- VIP displays all spreadsheet information in user-readable GEM windows.
- VIP can be manipulated using either the keyboard or the user friendly mouse.
- VIP is currently available for the AMIGA, ST and APPLE IIc, IIfx and IIGX.

### OFFICIAL UK VERSION

The official UK version of VIP Professional has a pound (£) sign as a standard part of its character set. Other versions have also been imported unofficially from the USA and have a dollar (\$) sign instead of a £ sign. Those versions will not be supported by the UK distributors or their dealers. Ensure that the VIP you buy is the official UK version, not an unofficial import with incorrect characters.

VIP Professional is available from Atari ST Dealers throughout the UK. If your local dealer does not have VIP in stock, it can be obtained by mail order (P&P Free) from:

**SILICA SHOP Ltd, 1-4 The Mews, Hatherley Road, Sidcup, Kent, DA14 4DX**  
Tel: 01-309 1111

All comparisons made to Lotus 1-2-3™ are to version 1A.
